

JOURNEY RISK MANAGEMENT (JRM) STUDY

Salem Terminal To SRI KARTHIKEYA AGENCIES

Objective of the JRM Report

This JRM report is designed to ensure compliance with the Central Motor Vehicle Rules, 1989 (CMVR), AIS 140 standards, and the Road Transport Safety Policy (RTSP). It provides a comprehensive risk assessment for the transportation of hazardous materials along specified routes. By integrating these legal frameworks, the report offers a broad strategy for identifying and mitigating route-specific risks.

Regulatory Compliance

The report complies with the Central Motor Vehicles (Eleventh Amendment) Rules, 2022, mandating safe transportation practices for N2 and N3 category vehicles carrying hazardous materials. These rules require detailed route assessments, especially regarding road conditions, speed limits, and risk areas, to ensure safety compliance.

Risk Management Strategy

This report categorizes transportation routes into high-risk and medium-risk areas, with a focus on factors such as sharp turns, accident-prone regions, and elevation changes. The goal is to provide actionable recommendations to minimize these risks, including speed regulations, driver warnings for hazardous zones, and the option of alternate routes.

Compliance with the Road Transport Safety Policy (RTSP)

The report integrates RTSP provisions, including mandatory driving hours, rest periods, and nighttime driving restrictions. It ensures that drivers follow official guidelines, such as taking prescribed rest breaks and avoiding dangerous road conditions like poor visibility, heavy crowds, or high-traffic areas during peak hours.

Emergency Preparedness and Response

The report highlights the significance of predetermined emergency stops for refueling, rest, and overnight stays. It includes protocols for safe responses to road hazards, alternative routes, and rerouting processes if roads are closed or severe weather arises. This aligns with the RTSP emphasis on driver safety and rapid emergency response.

Environmental Considerations

The JRM report addresses environmental risks along the route, ensuring compliance with environmental protection laws in ecologically sensitive zones. It suggests strategies such as identifying areas near water bodies, forests, or populated regions and implementing safety measures to minimize environmental impacts during transport.

Journey Risk Mitigation

The report includes route-specific risk assessments, detailed journey charts, and defensive driving guidelines for each transport route. Integration with vehicle tracking systems guarantees real-time warnings on hazardous areas, speed limits, and mandatory stops, consistent with RTSP and CMVR safety norms.

Compliance with Government Directives

This report fully adheres to governmental directives regarding hazardous material transportation, implementing mandatory speed limits, nighttime driving restrictions, and comprehensive driver briefings and real-time alerts about route-related risks.

Route Summary:

Total Distance: 89.67 km

Estimated Duration: 2.0 hours

Adjusted Duration (Heavy Vehicle): 2.6 hours

Start: (11.4381, 77.8734) End: (10.938507, 77.440428)

Welcome to the Journey Risk Management Study

1. Overview of the Route Map

The route spans approximately 89.67 kilometers from Sangagiri to Koduvai, passing through Kollapalayam, Kaspapettai, and Kangeyam. It primarily uses regional highways and state roads, known for their mixed urban and rural characteristics.

2. Typical Weather Conditions and Potential Weather-Related Hazards

Tamil Nadu generally experiences tropical weather, with high temperatures and humidity. The area has distinct seasons: the Northeast monsoon (October to December) may pose rainy conditions, leading to waterlogging and slippery roads. During summer (March to June), heat waves might affect driver performance and vehicle conditions.

3. Analysis of Traffic Patterns

Traffic is heavier during peak morning (8:00-10:00 AM) and evening hours (5:00-7:00 PM). Urban areas like Tiruchengode and Kangeyam experience congestion, particularly near market areas. Sundays and public holidays may see reduced traffic.

4. Assessment of Road Quality and Infrastructure

The road quality varies along the route. Major highways typically offer better maintenance and wider lanes. However, rural sections, especially near smaller towns like Kollapalayam, might have potholes and narrower lanes, requiring cautious driving, especially for heavy vehicles.

5. Suggestions for Alternative Routes for Emergencies

In case of route blockages, an alternative route could involve detouring through SH 86 after Tiruchengode towards Erode and then reconnecting to SH 174 via NH 544. This might add to the travel distance but could offer better infrastructure.

6. Summary of Local Regulations Affecting Hazardous Material Transport

Transport of hazardous materials requires adherence to state and national transport regulations, including obtaining the necessary permits. Night travel may be restricted in certain sections due to safety policies. Specific checkpoints may also necessitate additional documentation.

7. Overview of Historical Incidents

There have been periodic accidents involving heavy vehicles, often attributed to speeding or brake failures, particularly during the monsoon. No major incidents involving hazardous materials have been reported recently, but regional accident rates necessitate caution.

8. Environmental Considerations and Sensitive Areas

The route passes through a mix of agricultural and urban areas. Areas surrounding Kangeyam are environmentally sensitive due to agricultural activity. Drivers should be cautious to minimize emissions and noise pollution, especially near residential areas.

9. Analysis of Communication Coverage

Most of the route is well-covered by major telecom providers. However, rural stretches between Kaspapettai and Kangeyam might experience sporadic connectivity issues, potentially impacting GPS and communication.

10. Estimated Emergency Response Times

Emergency response times can vary, with urban areas like Tiruchengode having access to quicker responses (15-30 minutes). Rural areas might experience longer wait times due to distance (up to an hour).

11. (Correction) Overall Summary of Risk Assessment

The route is moderately safe for transporting hazardous materials, provided precautions are observed. Major risks include road conditions, traffic congestion, and weather-related issues. Efficient planning, adherence to regulations, and awareness of emergency procedures can mitigate these risks. Regular

communication checks and contingency planning for rerouting are recommended to manage unforeseen events effectively.
