JOURNEY RISK MANAGEMENT (JRM) STUDY

Salem Terminal TO PKS FUELS

Objective of the JRM Report

This JRM report is designed to ensure compliance with the Central Motor Vehicle Rules, 1989 (CMVR), AIS 140 standards, and the Road Transport Safety Policy (RTSP). It provides a comprehensive risk assessment for the transportation of hazardous materials along specified routes. By integrating these legal frameworks, the report offers a broad strategy for identifying and mitigating route-specific risks.

Regulatory Compliance

The report complies with the Central Motor Vehicles (Eleventh Amendment) Rules, 2022, mandating safe transportation practices for N2 and N3 category vehicles carrying hazardous materials. These rules require detailed route assessments, especially regarding road conditions, speed limits, and risk areas, to ensure safety compliance.

Risk Management Strategy

This report categorizes transportation routes into high-risk and medium-risk areas, with a focus on factors such as sharp turns, accident-prone regions, and elevation changes. The goal is to provide actionable

recommendations to minimize these risks, including speed regulations, driver warnings for hazardous zones, and the option of alternate routes.

Compliance with the Road Transport Safety Policy (RTSP)

The report integrates RTSP provisions, including mandatory driving hours, rest periods, and nighttime driving restrictions. It ensures that drivers follow official guidelines, such as taking prescribed rest breaks and avoiding dangerous road conditions like poor visibility, heavy crowds, or high-traffic areas during peak hours.

Emergency Preparedness and Response

The report highlights the significance of predetermined emergency stops for refueling, rest, and overnight stays. It includes protocols for safe responses to road hazards, alternative routes, and rerouting processes if roads are closed or severe weather arises. This aligns with the RTSP emphasis on driver safety and rapid emergency response.

Environmental Considerations

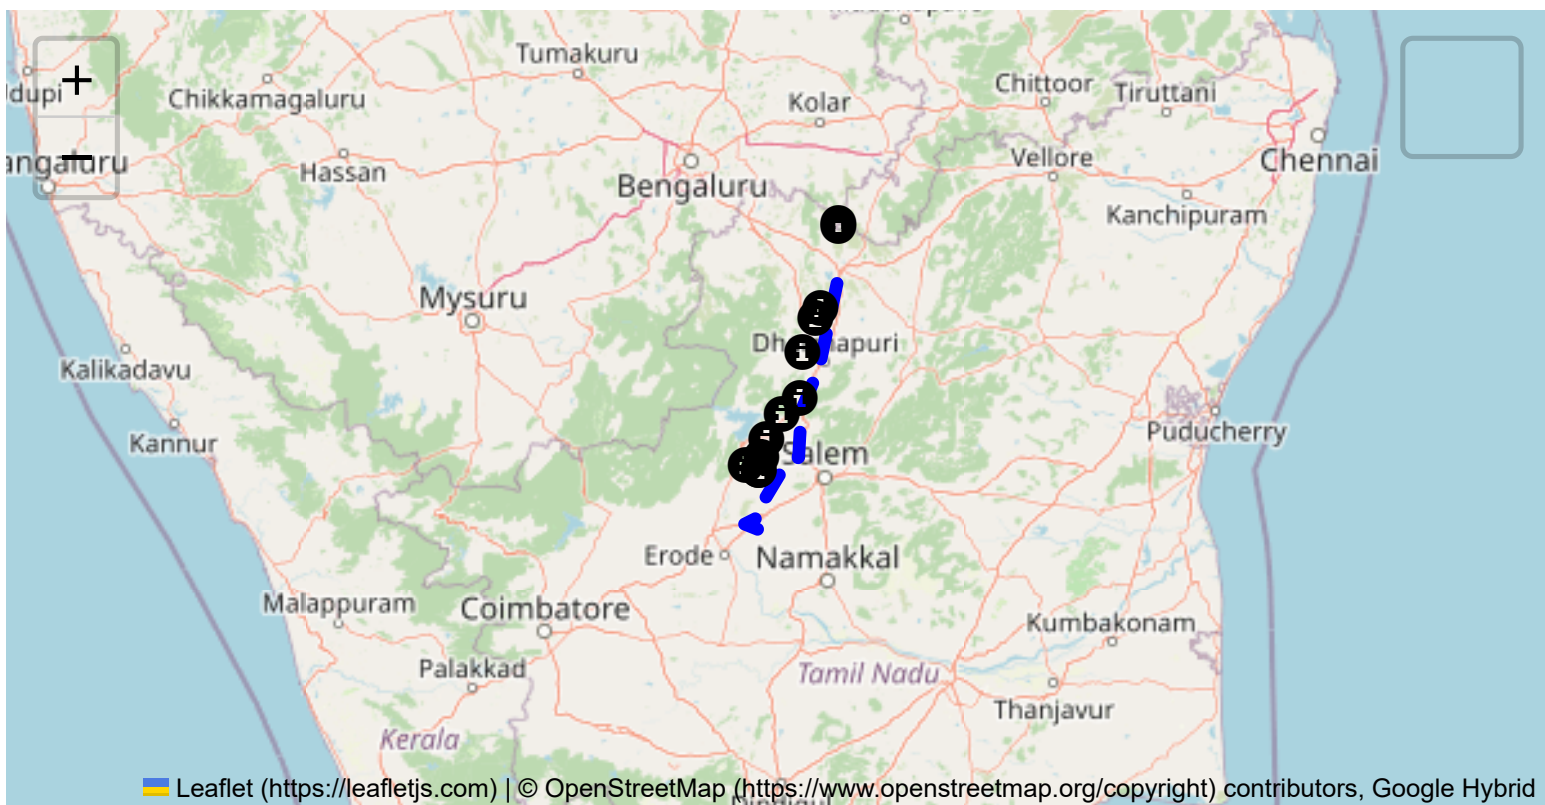

The JRM report addresses environmental risks along the route, ensuring compliance with environmental protection laws in ecologically sensitive zones. It suggests strategies such as identifying areas near water bodies, forests, or populated regions and implementing safety measures to minimize environmental impacts during transport.

Journey Risk Mitigation

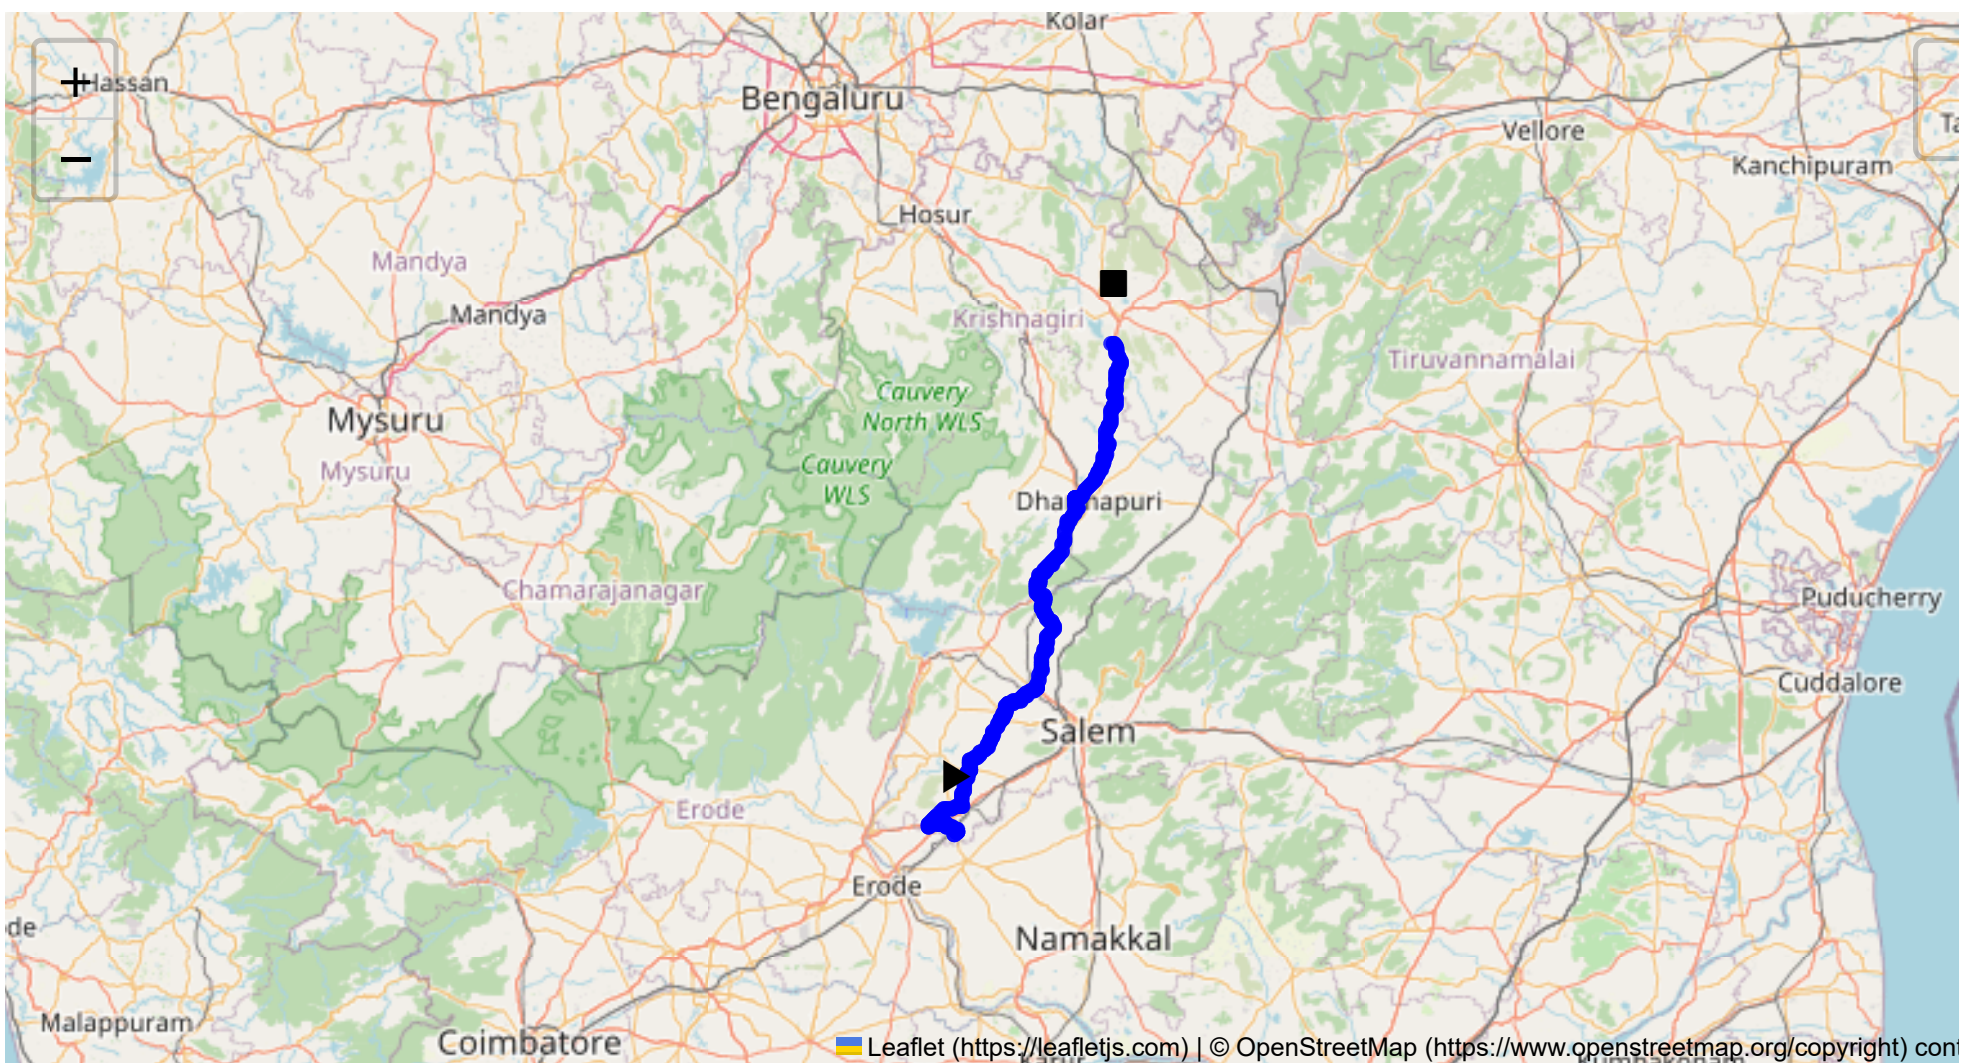

The report includes route-specific risk assessments, detailed journey charts, and defensive driving guidelines for each transport route. Integration with vehicle tracking systems guarantees real-time warnings on hazardous areas, speed limits, and mandatory stops, consistent with RTSP and CMVR safety norms.

Compliance with Government Directives

This report fully adheres to governmental directives regarding hazardous material transportation, implementing mandatory speed limits, nighttime driving restrictions, and comprehensive driver briefings and real-time alerts about route-related risks.

Route Summary:
Total Distance: 146.44 km
Estimated Duration: 2.9 hours
Adjusted Duration (Heavy Vehicle): 3.6 hours
Start: (11.4381, 77.8734)
End: (12.466239, 78.2065422)

Welcome to the Journey Risk Management Study

Route Overview: The route begins in Sangagiri, travels through Puthur, Padaiveedu, and other locales, ending in Periyamuthur near the KRP Dam. It spans about 146.44 km, primarily using a combination of national highways and state roads that connect several towns and rural areas.

Weather Conditions: Tamil Nadu experiences a tropical climate with distinct seasons. Between March and June, heatwaves can increase road surface temperatures, affecting vehicle performance. The monsoon

season (June to September) often brings heavy rains, potentially leading to flooding and reduced visibility. In winter (October to February), weather is milder, but early morning fog can be an issue.

Traffic Patterns:

- **Peak Hours:** Urban sections, particularly around Salem and Dharmapuri, witness high traffic volumes during traditional commuting hours (8-10 AM, 5-7 PM).
- **Congestion-Prone Areas:** Salem and stretches near major junctions on the Salem-Kochi Highway and Dharmapuri are congested during peak periods.

Road Quality and Infrastructure: Most highways on this route are in good condition, with well-maintained surfaces and clear signage. However, some rural stretches may have narrower, less maintained roads.

Alternative Routes for Emergencies: In case of road closures or other emergencies, diversions through regional roads connecting Salem to Dharmapuri, and then towards Hosur, can be considered. Precise navigation would depend on the actual point of emergency.

Local Regulations: Tamil Nadu has strict regulations on the transportation of hazardous materials, including mandatory permits, outlined routes, and times for heavy vehicle movement through certain urban areas to minimize risk to the public.

Historical Incidents: Heavy vehicle accidents are more common during monsoon seasons due to poor visibility and road conditions. Previous incidents have highlighted the need for caution around Salem and Dharmapuri, especially regarding sharp curves and slopes.

Environmental Considerations and Sensitive Areas: The area near KRP Dam and surrounding countryside in Tamil Nadu includes sensitive ecological zones. Drivers should minimize noise and air pollution around these areas to protect local wildlife and ecosystems.

Communication Coverage: Major stretches offer decent mobile coverage. However, certain rural areas between towns could have spotty network connections. Prior coordination with local networks could provide solutions for these gaps.

Emergency Response Times:

- **Sangagiri to Salem:** Approximately 20-30 minutes for emergency services due to proximity to urban centers.
- **Salem to Dharmapuri:** Around 45 minutes, slightly longer in remote or rural areas.
- **Dharmapuri to Periyamuthur:** Could take up to an hour due to limited infrastructure and distances from nearest emergency services.

Overall Risk Assessment Summary: The primary risks involve weather-related challenges, especially during the monsoon season, and potential congestion in urban areas. Road quality is generally reliable, but vigilance is necessary in areas with lesser road maintenance. Emergency response coverage is reasonable, though more remote areas could lead to delays. Adhering to local regulations and being prepared for sudden weather changes and spotty communication coverage remain essential for route safety.

Risk Assessment - Turns

	Risk Type	Risk Level	Coordinates	Speed Limit
0	Turn	High	11.43961, 77.87341	15 KM/Hr
