JOURNEY RISK MANAGEMENT (JRM) STUDY

Salem Terminal TO SRI VENKATESHWARA FUELS

Objective of the JRM Report

This JRM report is designed to ensure compliance with the Central Motor Vehicle Rules, 1989 (CMVR), AIS 140 standards, and the Road Transport Safety Policy (RTSP). It provides a comprehensive risk assessment for the transportation of hazardous materials along specified routes. By integrating these legal frameworks, the report offers a broad strategy for identifying and mitigating route-specific risks.

Regulatory Compliance

The report complies with the Central Motor Vehicles (Eleventh Amendment) Rules, 2022, mandating safe transportation practices for N2 and N3 category vehicles carrying hazardous materials. These rules require detailed route assessments, especially regarding road conditions, speed limits, and risk areas, to ensure safety compliance.

Risk Management Strategy

This report categorizes transportation routes into high-risk and medium-risk areas, with a focus on factors such as sharp turns, accident-prone regions, and elevation changes. The goal is to provide actionable

recommendations to minimize these risks, including speed regulations, driver warnings for hazardous zones, and the option of alternate routes.

Compliance with the Road Transport Safety Policy (RTSP)

The report integrates RTSP provisions, including mandatory driving hours, rest periods, and nighttime driving restrictions. It ensures that drivers follow official guidelines, such as taking prescribed rest breaks and avoiding dangerous road conditions like poor visibility, heavy crowds, or high-traffic areas during peak hours.

Emergency Preparedness and Response

The report highlights the significance of predetermined emergency stops for refueling, rest, and overnight stays. It includes protocols for safe responses to road hazards, alternative routes, and rerouting processes if roads are closed or severe weather arises. This aligns with the RTSP emphasis on driver safety and rapid emergency response.

Environmental Considerations

The JRM report addresses environmental risks along the route, ensuring compliance with environmental protection laws in ecologically sensitive zones. It suggests strategies such as identifying areas near water bodies, forests, or populated regions and implementing safety measures to minimize environmental impacts during transport.

Journey Risk Mitigation

The report includes route-specific risk assessments, detailed journey charts, and defensive driving guidelines for each transport route. Integration with vehicle tracking systems guarantees real-time warnings on hazardous areas, speed limits, and mandatory stops, consistent with RTSP and CMVR safety norms.

Compliance with Government Directives

This report fully adheres to governmental directives regarding hazardous material transportation, implementing mandatory speed limits, nighttime driving restrictions, and comprehensive driver briefings and real-time alerts about route-related risks.

Route Summary:
Total Distance: 200.78 km
Estimated Duration: 4.1 hours
Adjusted Duration (Heavy Vehicle): 5.1 hours
Start: (11.4381, 77.8734)
End: (12.762679, 77.911034)

Welcome to the Journey Risk Management Study

1. Overview of the Route Map

This route starts in Sangagiri and ends in Avalapalli, Hosur, spanning approximately 200.78 kilometers, passing through multiple towns and cities in Tamil Nadu. Key waypoints include Puthur, Padaiveedu, Sangagiri, Erumaipatti, Desavilakku, Omalur, Thoppur, Dharmapuri, Virupakshipuram, and Krishnagiri.

The journey involves a mix of state highways (e.g., SH 86) and main roads, providing a relatively direct path to the final destination.

2. Typical Weather Conditions and Potential Weather-Related Hazards

Tamil Nadu generally experiences hot and dry weather, with temperatures potentially reaching very high levels during the summer months (April to June). The monsoon season (June to September) can bring heavy rains, leading to reduced visibility and potential flooding in low-lying areas. During the Northeast Monsoon (October to December), expect occasional heavy rains, which might affect road conditions.

3. Analysis of Traffic Patterns

Traffic tends to be heavier in the mornings (7:00-10:00 AM) and late afternoons to evenings (4:00-8:00 PM), particularly near urban centers like Salem and Krishnagiri. Congestion-prone areas include main intersections and market areas in these cities. Local agricultural activity may also contribute to traffic, especially during harvest seasons.

4. Assessment of Road Quality and Infrastructure

The road quality varies along the route. Major highways like Salem-Kochi Highway and parts of NH44 are generally well-maintained, with multiple lanes and clear signage. However, some rural roads and smaller highways may have potholes, uneven surfaces, or be narrow, especially during the monsoon season when maintenance can be delayed.

5. Suggestions for Alternative Routes for Emergencies

In emergencies, consider using the Bangalore-Chennai Highway (NH 48) for bypassing congested or flood-prone areas. Local detours through village roads might be necessary, but verify road conditions as rural routes can be poorly maintained.

6. Summary of Local Regulations Affecting Hazardous Material Transport

Transport of hazardous materials is regulated by strict guidelines. Drivers need a valid license for dangerous goods, and vehicles must adhere to safety specifications. Specific zones, especially residential and school areas, may have restrictions on transporting hazardous materials during certain hours.

7. Overview of Historical Incidents

There have been occasional incidents of heavy vehicle accidents in dense traffic areas, most notably during inclement weather conditions. Reports of hazardous materials spillage are rare but highlight the need for caution when navigating narrow or congested roads.

8. Environmental Considerations and Sensitive Areas

The route traverses agricultural regions that are sensitive to chemical contamination. It is crucial to prevent leaks and spills, especially in ecologically sensitive zones near water bodies or habitats.

9. Analysis of Communication Coverage

Most of the route has reliable mobile network coverage, but rural stretches, such as forested areas near Thoppur, may have dead zones. Using a GPS device with offline maps is advisable.

10. Estimated Emergency Response Times

Emergency response times vary, with more rapid support available in urban areas like Salem and Krishnagiri. Rural response could face delays, taking 30-60 minutes longer due to distance and road conditions.

12. Overall Summary of Risk Assessment

The route from Sangagiri to Hosur through multiple transit points presents moderate risks due to varying road conditions, traffic congestion, and weather impacts. While primary highways are generally safe, vigilance is required in rural and monsoon-affected areas, particularly concerning hazardous materials. Preparation with alternative routes and awareness of regulations and emergency contacts can mitigate these risks.
