JOURNEY RISK MANAGEMENT (JRM) STUDY

Salem Terminal TO SANKAR AGENCIES

Objective of the JRM Report

This JRM report is designed to ensure compliance with the Central Motor Vehicle Rules, 1989 (CMVR), AIS 140 standards, and the Road Transport Safety Policy (RTSP). It provides a comprehensive risk assessment for the transportation of hazardous materials along specified routes. By integrating these legal frameworks, the report offers a broad strategy for identifying and mitigating route-specific risks.

Regulatory Compliance

The report complies with the Central Motor Vehicles (Eleventh Amendment) Rules, 2022, mandating safe transportation practices for N2 and N3 category vehicles carrying hazardous materials. These rules require detailed route assessments, especially regarding road conditions, speed limits, and risk areas, to ensure safety compliance.

Risk Management Strategy

This report categorizes transportation routes into high-risk and medium-risk areas, with a focus on factors such as sharp turns, accident-prone regions, and elevation changes. The goal is to provide actionable

recommendations to minimize these risks, including speed regulations, driver warnings for hazardous zones, and the option of alternate routes.

Compliance with the Road Transport Safety Policy (RTSP)

The report integrates RTSP provisions, including mandatory driving hours, rest periods, and nighttime driving restrictions. It ensures that drivers follow official guidelines, such as taking prescribed rest breaks and avoiding dangerous road conditions like poor visibility, heavy crowds, or high-traffic areas during peak hours.

Emergency Preparedness and Response

The report highlights the significance of predetermined emergency stops for refueling, rest, and overnight stays. It includes protocols for safe responses to road hazards, alternative routes, and rerouting processes if roads are closed or severe weather arises. This aligns with the RTSP emphasis on driver safety and rapid emergency response.

Environmental Considerations

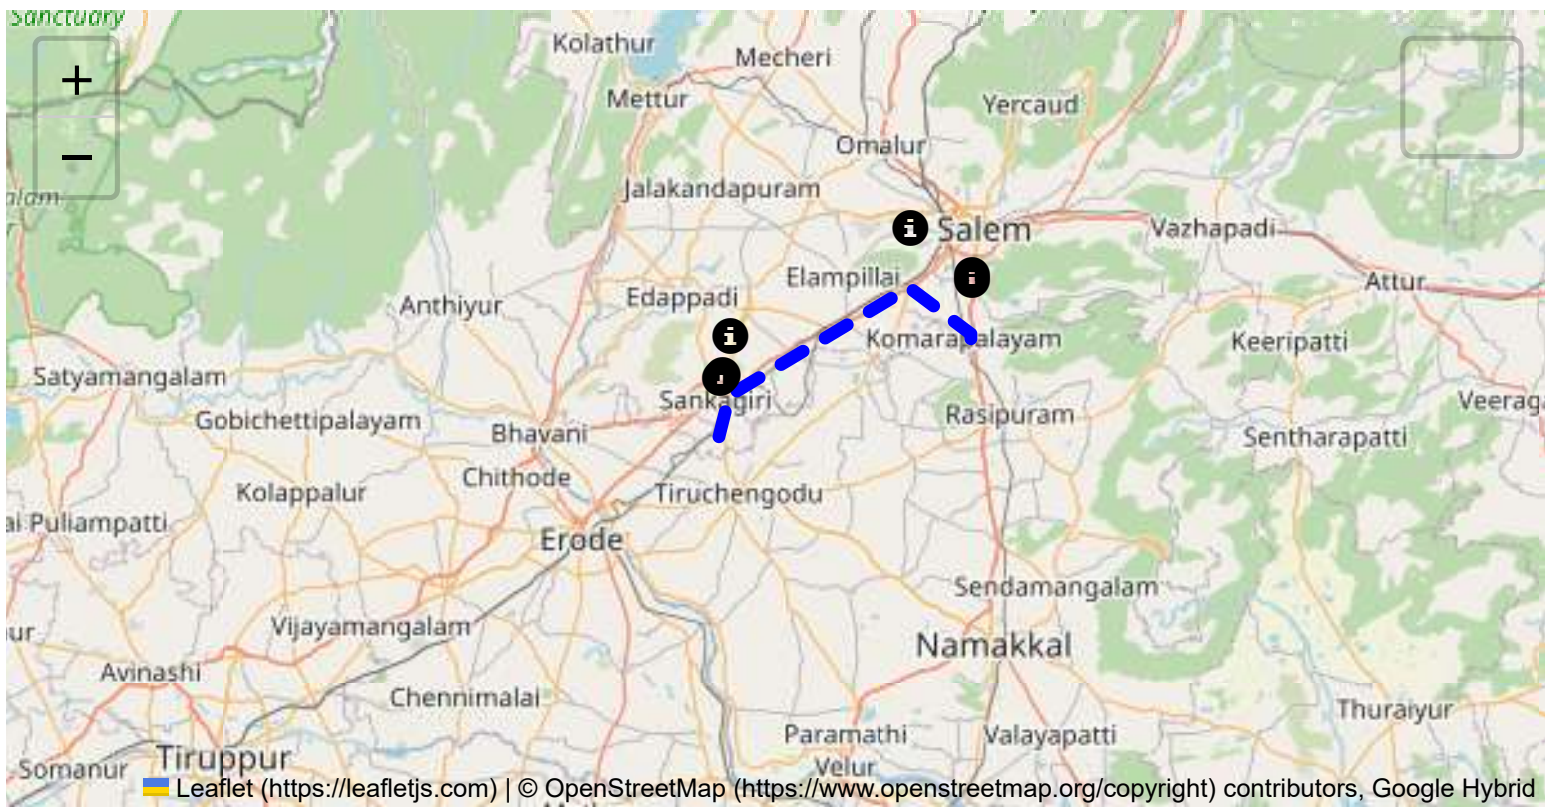

The JRM report addresses environmental risks along the route, ensuring compliance with environmental protection laws in ecologically sensitive zones. It suggests strategies such as identifying areas near water bodies, forests, or populated regions and implementing safety measures to minimize environmental impacts during transport.

Journey Risk Mitigation

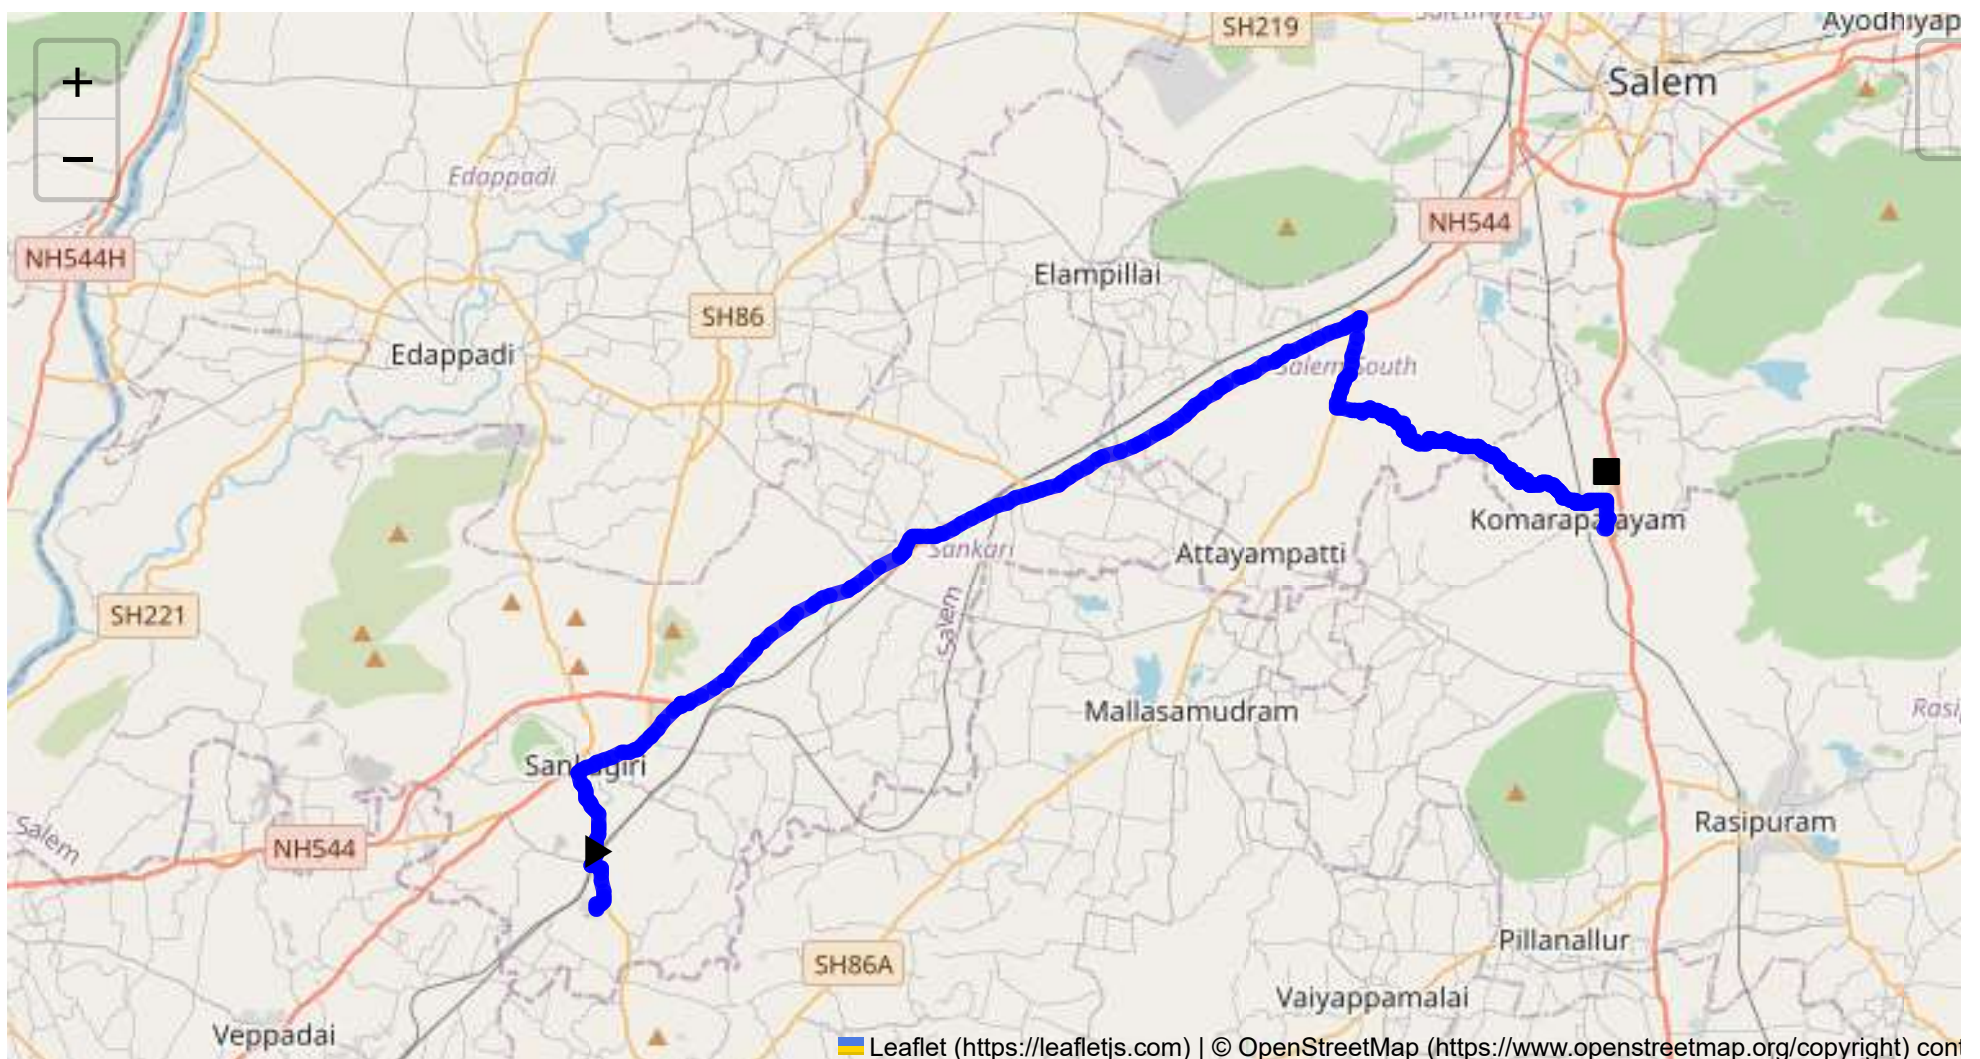

The report includes route-specific risk assessments, detailed journey charts, and defensive driving guidelines for each transport route. Integration with vehicle tracking systems guarantees real-time warnings on hazardous areas, speed limits, and mandatory stops, consistent with RTSP and CMVR safety norms.

Compliance with Government Directives

This report fully adheres to governmental directives regarding hazardous material transportation, implementing mandatory speed limits, nighttime driving restrictions, and comprehensive driver briefings and real-time alerts about route-related risks.

Route Summary:
Total Distance: 44.76 km
Estimated Duration: 1.1 hours
Adjusted Duration (Heavy Vehicle): 1.4 hours
Start: (11.4381, 77.8734)
End: (11.53807, 78.142586)

Welcome to the Journey Risk Management Study

1. Overview of the Route Map: The route begins at Sangagiri in Tamil Nadu, leading through Kangeyampalayam, Akkamapettai-Sendrayagovandanur Rd, and Ariyanur, to reach Mallur. This route largely follows state highways and local roads through rural and semi-urban areas, covering a distance of approximately 44.76 kilometers.

2. Typical Weather Conditions and Potential Weather-Related Hazards: Tamil Nadu generally experiences a tropical climate. The region can be subject to heavy rains during the monsoon season (October to December) which may lead to waterlogging and reduced visibility. Heat can be intense in the summer months, potentially affecting vehicle performance.

3. Analysis of Traffic Patterns:

1. Congestion is likely around Sangagiri and Ariyanur, especially during market hours and weekends.
2. Peak congestion hours typically occur during the morning (8-10 AM) and evening (5-7 PM) commutes.
3. Traffic decreases in rural sections between towns.

4. Assessment of Road Quality and Infrastructure:

1. The primary roads are generally well-maintained. However, some secondary roads may have potholes and uneven surfaces.
2. Rural roads might be narrow, which can pose challenges for heavy vehicles.

5. Suggestions for Alternative Routes for Emergencies: In case of roadblocks or emergencies, consider rerouting through the highways NH44 or NH544 for faster detours to neighboring towns or regions.

6. Summary of Local Regulations Affecting Hazardous Material Transport:

1. Tamil Nadu requires special permits for transporting hazardous materials.
2. Designated routes for transporting dangerous goods should be adhered to, and vehicles should carry signs indicating hazardous material.

7. Overview of Historical Incidents:

1. Reports of road mishaps involving heavy vehicles are relatively rare but have occurred, often related to improper handling or mechanical failure.
2. No major chemical spills or significant incidents have been documented recently.

8. Environmental Considerations and Sensitive Areas:

1. The route passes through agricultural zones; contamination from hazardous materials could impact crops and water sources.
2. Efforts must be made to minimize noise and air pollution, especially near village settlements.

9. Analysis of Communication Coverage:

1. Mobile and GPS coverage is generally good along the main route.
2. Some rural pockets may experience weak signal, impacting communication.

10. Estimated Emergency Response Times:

1. Urban areas (Sangagiri, Ariyanur, Mallur) can expect an emergency response time of approximately 15-30 minutes.
2. Remote sections could see responses delayed to 45 minutes or more.

12. Overall Summary of Risk Assessment: The route from Sangagiri to Mallur offers a reasonably safe path for truck drivers, with standard risks associated with rural and semi-urban transit. Major risks include road quality fluctuations, congestion during peak hours, and weather impacts. With proper precautions, adherence to local regulations, and awareness of emergency protocols, drivers can manage these risks effectively.

Risk Assessment - Turns

	Risk Type	Risk Level	Coordinates	Speed Limit
0	Turn	Medium	11.43822, 77.87348	30 KM/Hr
