JOURNEY RISK MANAGEMENT (JRM) STUDY

Salem Terminal to SRI VENKATESA TRADERS

Objective of the JRM Report

This JRM report is designed to ensure compliance with the Central Motor Vehicle Rules, 1989 (CMVR), AIS 140 standards, and the Road Transport Safety Policy (RTSP). It provides a comprehensive risk assessment for the transportation of hazardous materials along specified routes. By integrating these legal frameworks, the report offers a broad strategy for identifying and mitigating route-specific risks.

Regulatory Compliance

The report complies with the Central Motor Vehicles (Eleventh Amendment) Rules, 2022, mandating safe transportation practices for N2 and N3 category vehicles carrying hazardous materials. These rules require detailed route assessments, especially regarding road conditions, speed limits, and risk areas, to ensure safety compliance.

Risk Management Strategy

This report categorizes transportation routes into high-risk and medium-risk areas, with a focus on factors such as sharp turns, accident-prone regions, and elevation changes. The goal is to provide actionable

recommendations to minimize these risks, including speed regulations, driver warnings for hazardous zones, and the option of alternate routes.

Compliance with the Road Transport Safety Policy (RTSP)

The report integrates RTSP provisions, including mandatory driving hours, rest periods, and nighttime driving restrictions. It ensures that drivers follow official guidelines, such as taking prescribed rest breaks and avoiding dangerous road conditions like poor visibility, heavy crowds, or high-traffic areas during peak hours.

Emergency Preparedness and Response

The report highlights the significance of predetermined emergency stops for refueling, rest, and overnight stays. It includes protocols for safe responses to road hazards, alternative routes, and rerouting processes if roads are closed or severe weather arises. This aligns with the RTSP emphasis on driver safety and rapid emergency response.

Environmental Considerations

The JRM report addresses environmental risks along the route, ensuring compliance with environmental protection laws in ecologically sensitive zones. It suggests strategies such as identifying areas near water bodies, forests, or populated regions and implementing safety measures to minimize environmental impacts during transport.

Journey Risk Mitigation

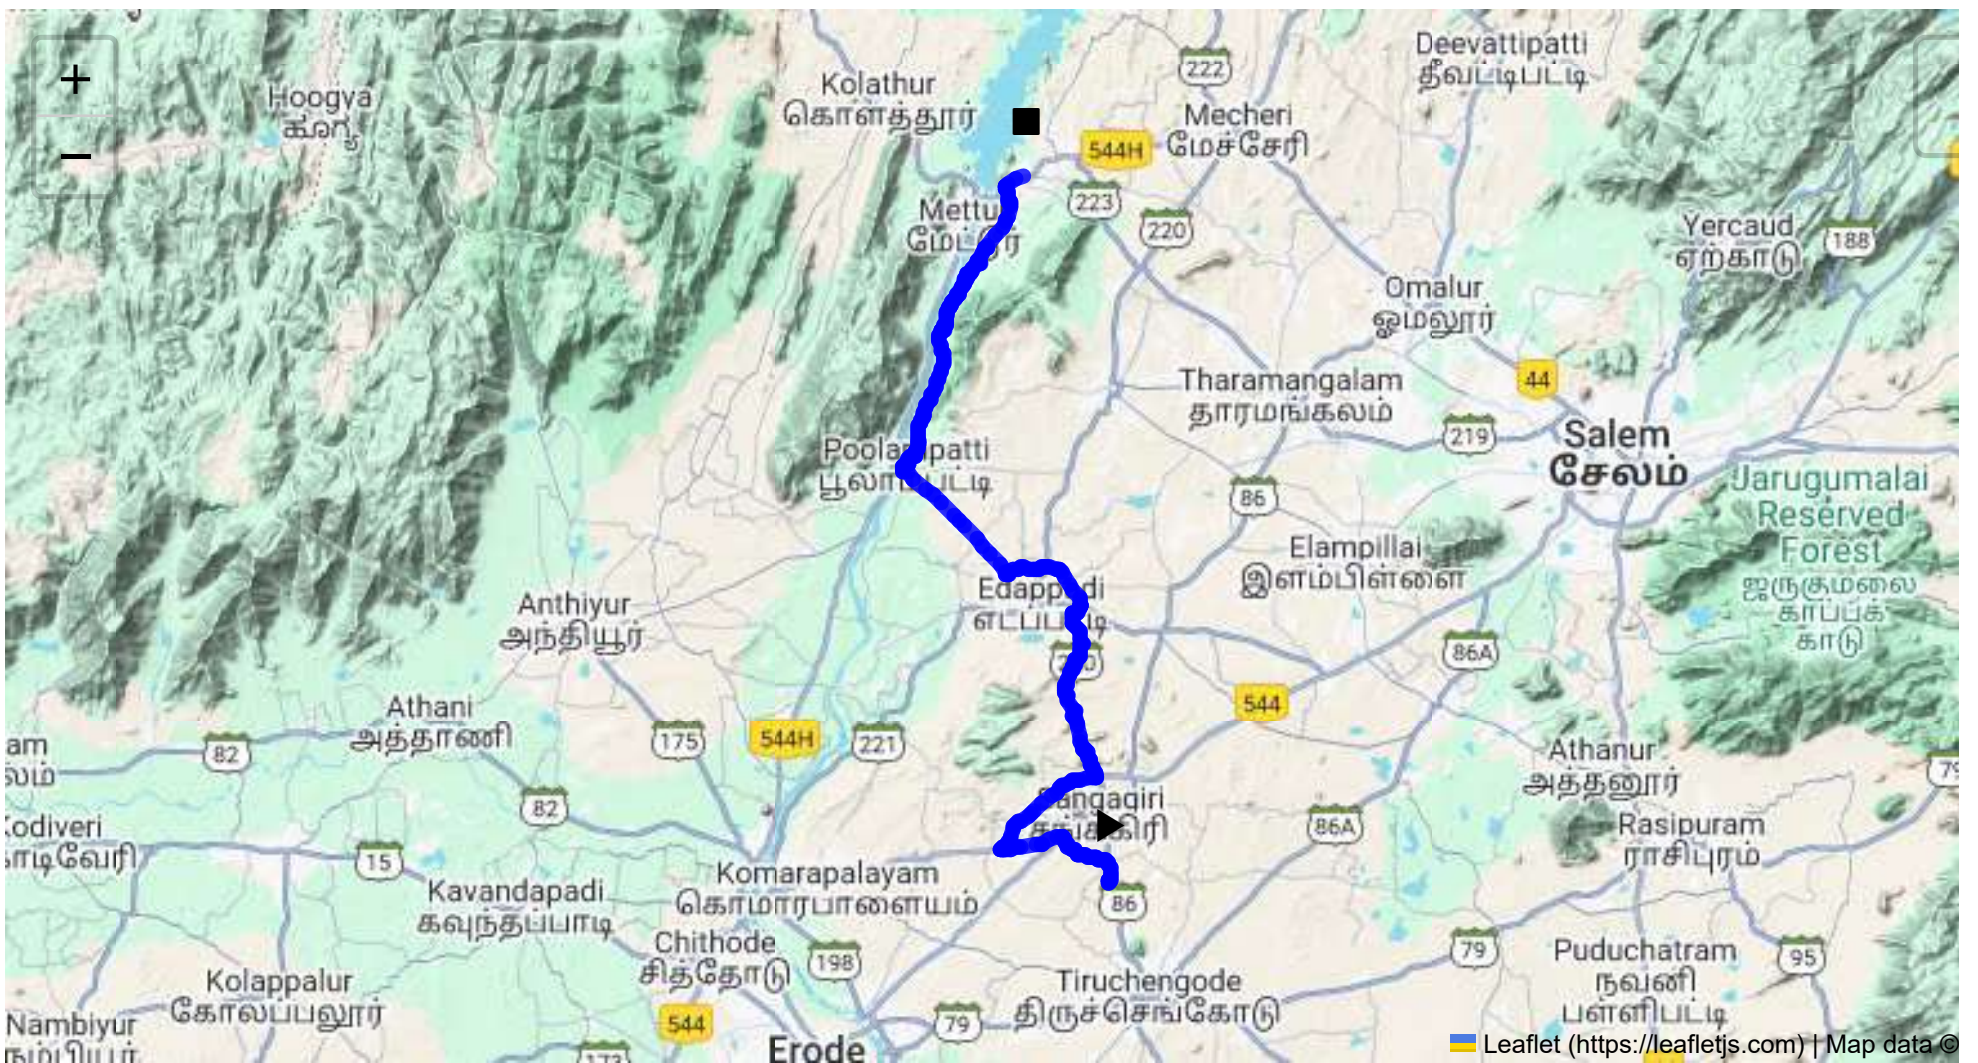

The report includes route-specific risk assessments, detailed journey charts, and defensive driving guidelines for each transport route. Integration with vehicle tracking systems guarantees real-time warnings on hazardous areas, speed limits, and mandatory stops, consistent with RTSP and CMVR safety norms.

Compliance with Government Directives

This report fully adheres to governmental directives regarding hazardous material transportation, implementing mandatory speed limits, nighttime driving restrictions, and comprehensive driver briefings and real-time alerts about route-related risks.

Route Summary:
Total Distance: 61.59 km
Estimated Duration: 1.5 hours
Adjusted Duration (Heavy Vehicle): 1.8 hours
Start: (11.4381, 77.8734)
End: (11.8073, 77.8282)

Welcome to the Journey Risk Management Study

Route Map Overview: The route from Sangagiri to S.V. Traders & Co. in P.N. Patti primarily follows regional roads and highways. It begins in Sangagiri with a drive south-eastward, joining Sankari RS - Erode Privu Road before merging onto Bhavani Main Road. The journey covers urban, semi-urban, and rural landscapes. The total distance is about 61.59 kilometers, and the travel time is approximately 1 hour and 46 minutes for heavy vehicles.

Weather Conditions and Hazards: Tamil Nadu generally experiences a tropical climate. During the summer months, high temperatures can affect vehicle cooling systems, while during monsoons (June to September), heavy rains might lead to water-logged roads and slippery surfaces, particularly in rural stretches.

Traffic Patterns: Typical congestion areas include urban segments near Sangagiri and closer to Salem Main Road in P.N. Patti. Peak traffic hours are usually in the morning (8-10 AM) and evening (6-8 PM). Congestion is more prevalent during local festivals or market days.

Road Quality and Infrastructure: The road quality along the route varies, with some sections of the Bhavani Main Road being prone to potholes and uneven surfaces. There are periodic highway repair projects which might cause temporary diversions or slow down traffic.

Emergency Routes: For emergencies, detours on smaller rural roads are possible, though these might not be ideal for larger vehicle transport. Alternatively, taking nearby state highways can offer faster relief from traffic jams or blockages.

Local Regulations on Hazmat Transport: Tamil Nadu has specific regulations on the transport of hazardous materials, including restrictions on timing (avoiding school zones during operational hours) and ensuring appropriate vehicle markings and documentation.

Historical Incidents: There have been occurrences of overturned trucks and minor hazardous spills, especially along heavily trafficked segments of the route. Awareness of local traffic norms and ongoing construction activities helps mitigate these risks.

Environmental Considerations: Sensitive areas include any stretches passing by agricultural zones or water bodies where spillage can have pronounced negative impacts. Awareness of local biodiversity is crucial to ensuring minimal disruption.

Communication Coverage: The majority of the route is well-covered with mobile network services. However, there might be brief dead zones, particularly in remote rural parts. It is advisable to plan communications accordingly.

Emergency Response Times: Response times vary by location; urban areas near major towns may see response times as short as 15-30 minutes, but more remote rural sections could experience delays of up to an hour for emergency services.

Overall Risk Assessment: The route poses moderate risks due to varying road conditions, potential weather impacts, and congestion. However, with appropriate preparation, adherence to regulations, and maintaining communication, these risks can be effectively managed. It is advisable for drivers to stay updated on weather forecasts, traffic news, and road conditions via reliable sources while planning their journey.

Risk Assessment - Turns

	Risk Type	Risk Level	Coordinates	Speed Limit
0	Roundabout	High	11.58300, 77.85813	15 KM/Hr
