JOURNEY RISK MANAGEMENT (JRM) STUDY

Salem Terminal TO VEYESS & CO.

Objective of the JRM Report

This JRM report is designed to ensure compliance with the Central Motor Vehicle Rules, 1989 (CMVR), AIS 140 standards, and the Road Transport Safety Policy (RTSP). It provides a comprehensive risk assessment for the transportation of hazardous materials along specified routes. By integrating these legal frameworks, the report offers a broad strategy for identifying and mitigating route-specific risks.

Regulatory Compliance

The report complies with the Central Motor Vehicles (Eleventh Amendment) Rules, 2022, mandating safe transportation practices for N2 and N3 category vehicles carrying hazardous materials. These rules require detailed route assessments, especially regarding road conditions, speed limits, and risk areas, to ensure safety compliance.

Risk Management Strategy

This report categorizes transportation routes into high-risk and medium-risk areas, with a focus on factors such as sharp turns, accident-prone regions, and elevation changes. The goal is to provide actionable

recommendations to minimize these risks, including speed regulations, driver warnings for hazardous zones, and the option of alternate routes.

Compliance with the Road Transport Safety Policy (RTSP)

The report integrates RTSP provisions, including mandatory driving hours, rest periods, and nighttime driving restrictions. It ensures that drivers follow official guidelines, such as taking prescribed rest breaks and avoiding dangerous road conditions like poor visibility, heavy crowds, or high-traffic areas during peak hours.

Emergency Preparedness and Response

The report highlights the significance of predetermined emergency stops for refueling, rest, and overnight stays. It includes protocols for safe responses to road hazards, alternative routes, and rerouting processes if roads are closed or severe weather arises. This aligns with the RTSP emphasis on driver safety and rapid emergency response.

Environmental Considerations

The JRM report addresses environmental risks along the route, ensuring compliance with environmental protection laws in ecologically sensitive zones. It suggests strategies such as identifying areas near water bodies, forests, or populated regions and implementing safety measures to minimize environmental impacts during transport.

Journey Risk Mitigation

The report includes route-specific risk assessments, detailed journey charts, and defensive driving guidelines for each transport route. Integration with vehicle tracking systems guarantees real-time warnings on hazardous areas, speed limits, and mandatory stops, consistent with RTSP and CMVR safety norms.

Compliance with Government Directives

This report fully adheres to governmental directives regarding hazardous material transportation, implementing mandatory speed limits, nighttime driving restrictions, and comprehensive driver briefings and real-time alerts about route-related risks.

Route Summary:
Total Distance: 198.03 km
Estimated Duration: 4.2 hours
Adjusted Duration (Heavy Vehicle): 5.2 hours
Start: (11.4381, 77.8734)
End: (12.844593, 77.871727)

Welcome to the Journey Risk Management Study

1. Overview of the Route Map:

- The route spans approximately 198.03 kilometers, beginning at Sangagiri, Tamil Nadu, and ending at Bharathi Nagar, Kadiriganadinna, Tamil Nadu. It passes through multiple locations including Puthur, Padaiveedu, and Omalur. The primary highways used include the Salem - Kochi Highway and various state highways like SH 86.

2. Typical Weather Conditions and Potential Weather-Related Hazards:

- Tamil Nadu experiences a tropical climate, with the northeast monsoon (October to December) bringing heavy rains that could cause flooding and waterlogging. The region is also prone to heatwaves during summer (March to May), which might lead to road surface deterioration or heat-related vehicular issues.

3. Analysis of Traffic Patterns:

- The route typically faces heavy traffic congestion during morning (7 AM - 10 AM) and evening (5 PM - 8 PM) peak hours, especially in urban areas such as Salem and Hosur. National and state highways might also have heavy truck traffic consistently throughout the day.

4. Assessment of Road Quality and Infrastructure:

- Generally, the main highways like Salem - Kochi Highway are well-maintained, but some rural roads might have potholes or uneven surfaces. Construction activity and toll booths could also slow down traffic flow and increase travel time.

5. Suggestions for Alternative Routes for Emergencies:

- In case of roadblocks or severe congestion, alternative routes include using NH 44 or detours through nearby smaller towns which might not be optimal for heavy vehicles due to their narrow widths and lack of proper infrastructure.

6. Summary of Local Regulations Affecting Hazardous Material Transport:

- Tamil Nadu follows stringent regulations regarding the transport of hazardous materials, requiring proper labeling, safety documentation, and adherence to specific routes designated for hazardous material transport to minimize risk to populated areas.

7. Overview of Historical Incidents Involving Heavy Vehicles:

- Past incidents have typically involved vehicular collisions or overturning due to speeding on curves, especially in hilly or poorly lit sections of the route. Specific data may be drawn from local transport and safety reports.

8. Environmental Considerations and Sensitive Areas:

- The route passes near ecologically sensitive areas like reserved forests which require extra caution to avoid polluting these regions. Local wildlife crossings are also important to monitor to prevent accidents.

9. Analysis of Communication Coverage:

- While most of the route is covered by major cellular networks, rural and forested stretches might feature dead zones or weak signals impacting communication, especially in areas like Desavilakku and parts near Thoppur.

10. Estimated Emergency Response Times:

- In urban areas, emergency response times are approximately 15-30 minutes, whereas in rural or remote areas, response times may extend to an hour or more due to limited resources and accessibility challenges.

11. Overall Summary of Risk Assessment:

- The route from Sangagiri to Bharathi Nagar poses moderate risks for heavy vehicles carrying hazardous materials. Key concerns include weather-related conditions, road quality variances, and traffic congestion. Adequate route planning, adherence to local transportation laws, and real-time monitoring for emergency preparedness can mitigate risks effectively. Regular checks on vehicle condition and driver alertness are imperative, particularly through environmentally sensitive and remote stretches.
