JOURNEY RISK MANAGEMENT (JRM) STUDY

Salem Terminal TO JAYAM & CO

Objective of the JRM Report

This JRM report is designed to ensure compliance with the Central Motor Vehicle Rules, 1989 (CMVR), AIS 140 standards, and the Road Transport Safety Policy (RTSP). It provides a comprehensive risk assessment for the transportation of hazardous materials along specified routes. By integrating these legal frameworks, the report offers a broad strategy for identifying and mitigating route-specific risks.

Regulatory Compliance

The report complies with the Central Motor Vehicles (Eleventh Amendment) Rules, 2022, mandating safe transportation practices for N2 and N3 category vehicles carrying hazardous materials. These rules require detailed route assessments, especially regarding road conditions, speed limits, and risk areas, to ensure safety compliance.

Risk Management Strategy

This report categorizes transportation routes into high-risk and medium-risk areas, with a focus on factors such as sharp turns, accident-prone regions, and elevation changes. The goal is to provide actionable

recommendations to minimize these risks, including speed regulations, driver warnings for hazardous zones, and the option of alternate routes.

Compliance with the Road Transport Safety Policy (RTSP)

The report integrates RTSP provisions, including mandatory driving hours, rest periods, and nighttime driving restrictions. It ensures that drivers follow official guidelines, such as taking prescribed rest breaks and avoiding dangerous road conditions like poor visibility, heavy crowds, or high-traffic areas during peak hours.

Emergency Preparedness and Response

The report highlights the significance of predetermined emergency stops for refueling, rest, and overnight stays. It includes protocols for safe responses to road hazards, alternative routes, and rerouting processes if roads are closed or severe weather arises. This aligns with the RTSP emphasis on driver safety and rapid emergency response.

Environmental Considerations

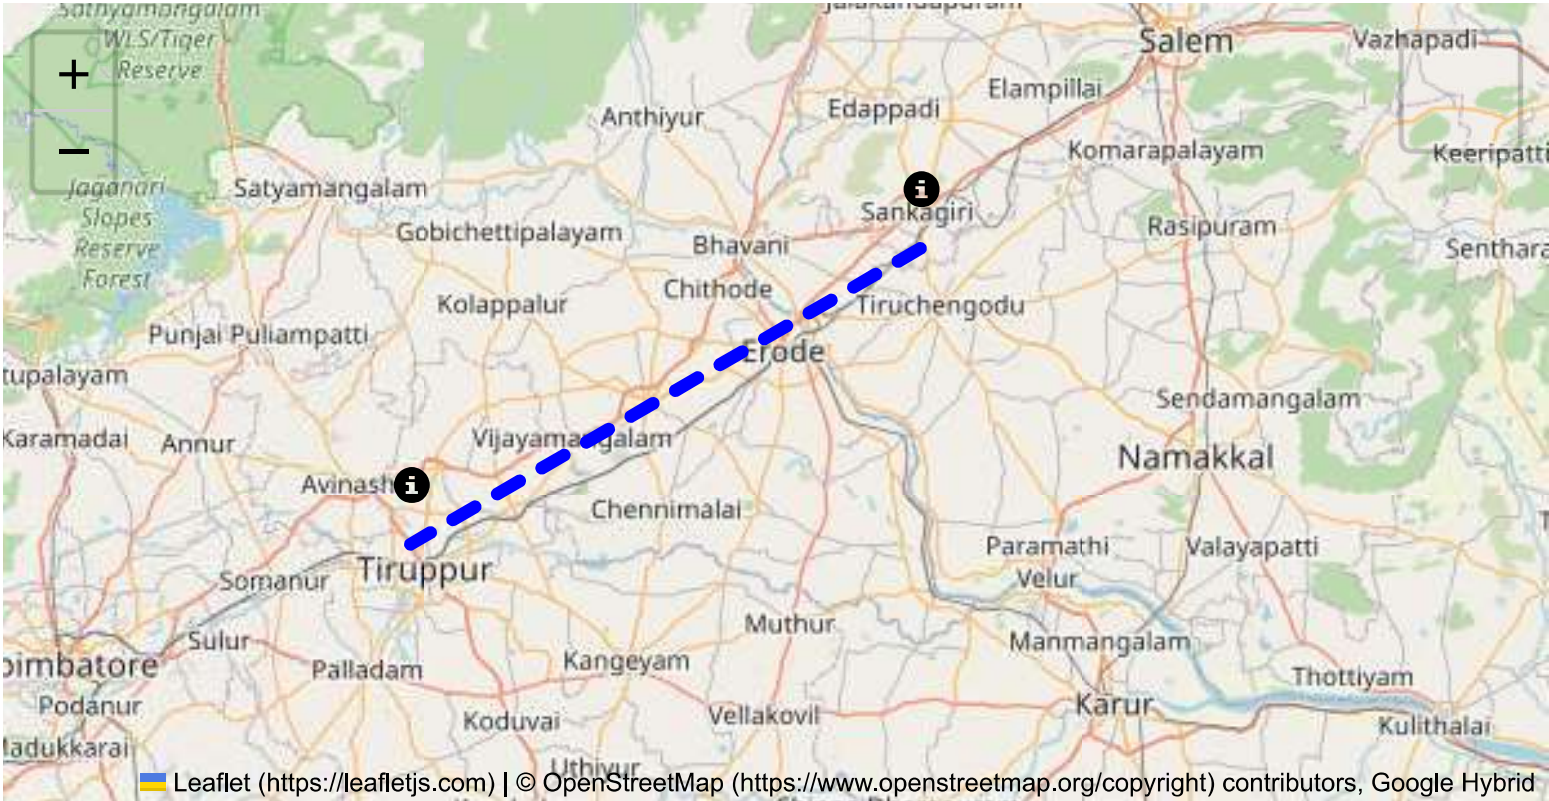

The JRM report addresses environmental risks along the route, ensuring compliance with environmental protection laws in ecologically sensitive zones. It suggests strategies such as identifying areas near water bodies, forests, or populated regions and implementing safety measures to minimize environmental impacts during transport.

Journey Risk Mitigation

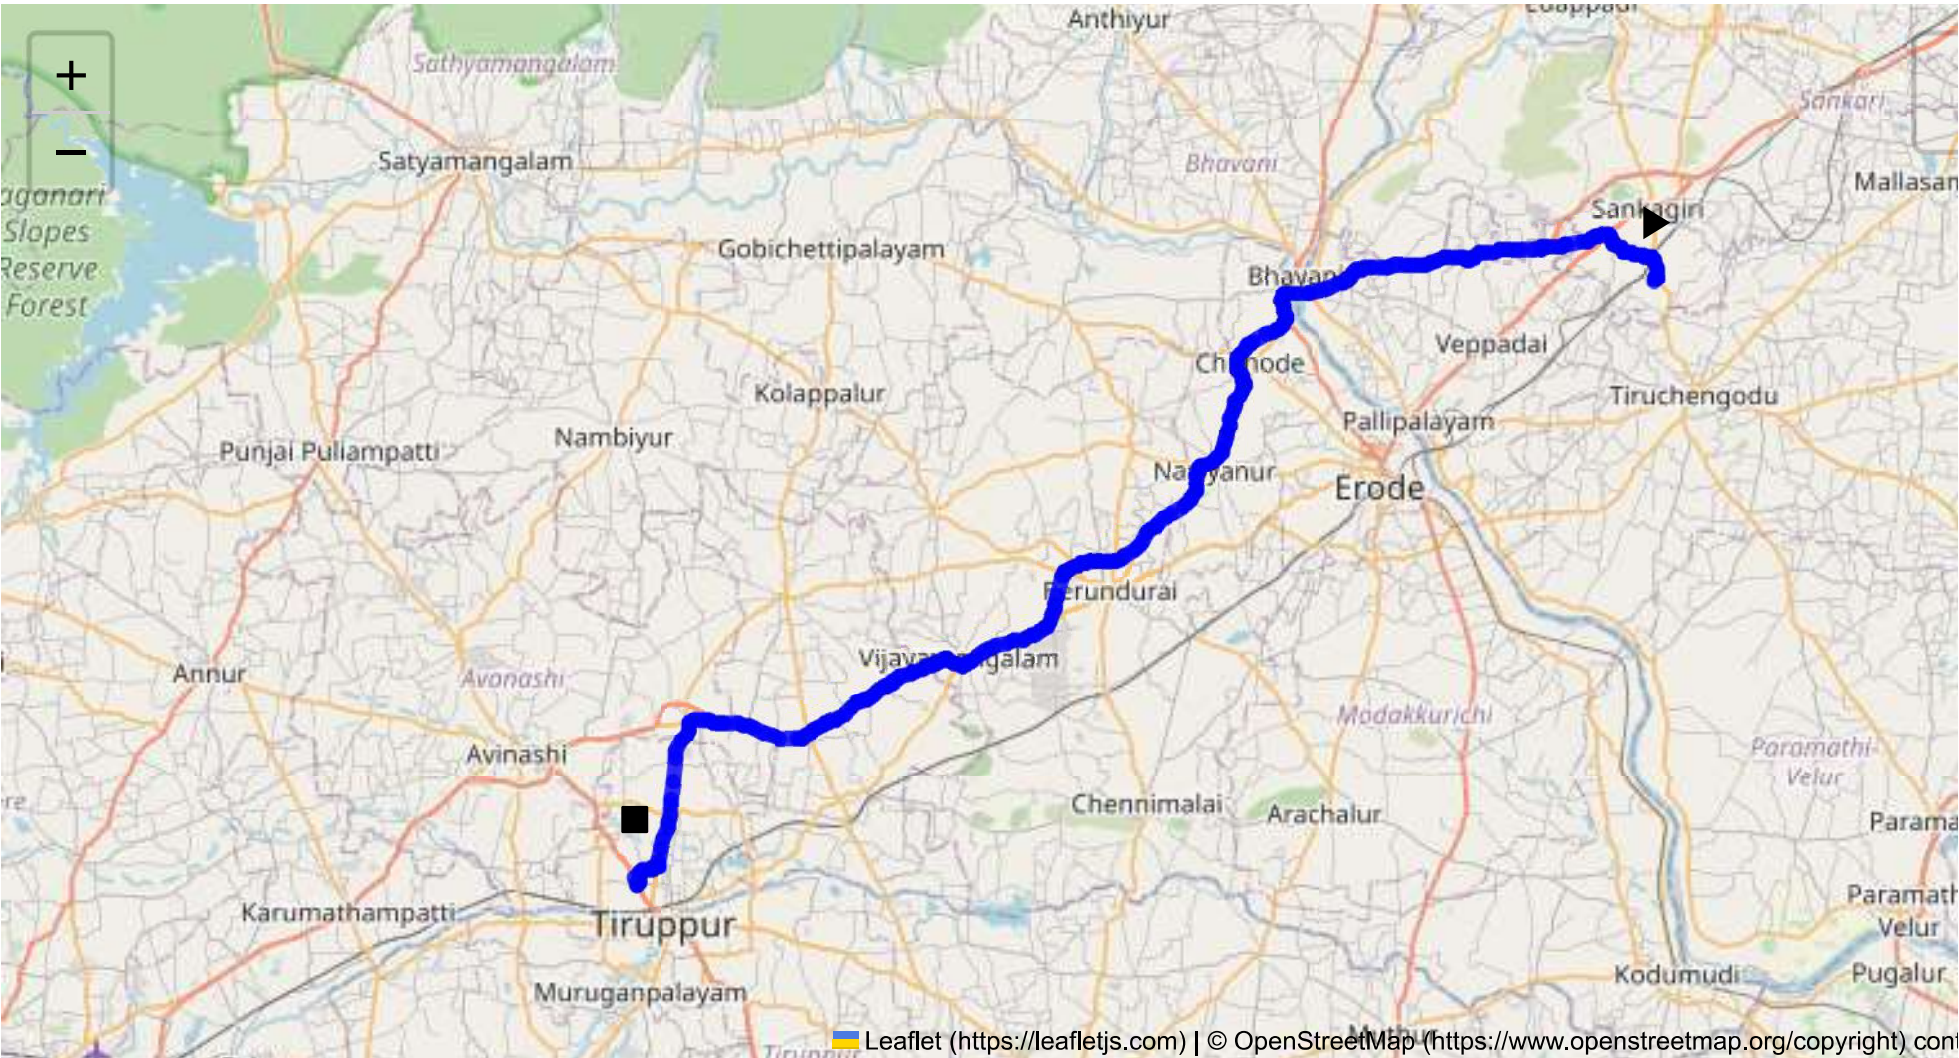

The report includes route-specific risk assessments, detailed journey charts, and defensive driving guidelines for each transport route. Integration with vehicle tracking systems guarantees real-time warnings on hazardous areas, speed limits, and mandatory stops, consistent with RTSP and CMVR safety norms.

Compliance with Government Directives

This report fully adheres to governmental directives regarding hazardous material transportation, implementing mandatory speed limits, nighttime driving restrictions, and comprehensive driver briefings and real-time alerts about route-related risks.

Route Summary:
Total Distance: 85.53 km
Estimated Duration: 1.8 hours
Adjusted Duration (Heavy Vehicle): 2.2 hours
Start: (11.4381, 77.8734)
End: (11.125996, 77.329278)

Welcome to the Journey Risk Management Study

Route Overview

The route from CVQF+23W, Sangagiri to SF 83, TS35/1, Avinashi - Tiruppur Rd in Tiruppur spans approximately 85.53 kilometers, primarily utilizing National and State Highways. The major roads involved include NH544 and local connecting roads. The journey typically takes around 1.77 hours for heavy vehicles carrying hazardous materials.

Weather Conditions

The region experiences a tropical climate with three primary seasons: summer (March to June), monsoon (July to October), and winter (November to February).

- **Summer:** High temperatures, occasionally reaching above 40°C. Heat might affect road conditions and vehicle performance.
- **Monsoon:** The area receives substantial rainfall, leading to potential flooding, particularly in low-lying areas.
- **Winter:** Mild weather, but fog can occur in the early morning hours, reducing visibility.

Traffic Patterns

- **Peak Hours:** Typically, peak traffic is observed in the morning (8:00 AM - 10:30 AM) and evening (5:00 PM - 8:00 PM).
- **Congestion-Prone Areas:** Areas such as Salem and Erode might experience severe traffic congestion during peak hours and market days.

Road Quality and Infrastructure

- **Road Conditions:** Major highways like NH544 are generally well-maintained. However, local connecting roads might have potholes and uneven surfaces.
- **Infrastructure:** Adequate signage but some areas may have limited lighting at night. Road widening and construction activities may cause temporary diversions.

Alternative Routes

For emergencies, alternative routes include:

- Via SH 86 cutting through smaller towns, though this may increase travel time.
- Bypass roads around major towns can serve as alternatives but require knowledge of local road conditions.

Local Regulations on Hazardous Material Transport

- **Regulations:** Adherence to the Central Motor Vehicles Rules for hazardous goods is mandatory, including proper labeling, vehicle safety measures, and emergency information systems.
- **Regulatory Stops:** Checkpoints may be in place to verify compliance with transport regulations.

Historical Incidents Involving Heavy Vehicles

- **Accidents:** Occasional incidents of vehicle overturns and spills primarily due to driver fatigue and sharp turns.
- **Incident Zones:** Areas near Salem and Erode have documented higher numbers of heavy vehicle-related incidents.

Environmental Considerations and Sensitive Areas

- **Areas of Concern:** Nearby wildlife sanctuaries and waterways require careful driving to minimize environmental impact.
- **Spill Response:** Swift action is critical near sensitive areas, demanding awareness of emergency cleanup protocols.

Communication Coverage

- **Coverage:** Generally good along major highways.
- **Dead Zones:** Possible signal drop in more rural stretches and ghat sections. Use satellite communication devices if frequent communication is critical.

Estimated Emergency Response Times

- **Urban Areas:** (Salem, Erode, Tiruppur) within 30-45 minutes.
- **Rural Sections:** Can exceed one hour depending on proximity to emergency services.

Overall Risk Assessment

- **High-Risk:** Monsoon season due to floods, specific congested areas.
- **Moderate-Risk:** Rest of the year with the need for proactive monitoring.
- **Recommendations:** Utilize GPS for real-time traffic updates, adhere strictly to road safety guidelines, and maintain frequent communication with dispatch.

In summary, while the route is manageable for transporting hazardous materials, awareness of weather patterns, traffic conditions, and infrastructure challenges is essential to minimize risk. Continuous monitoring and preparedness for emergency situations are critical to ensure the safety and efficiency of transport operations.

Risk Assessment - Turns

	Risk Type	Risk Level	Coordinates	Speed Limit
0	Turn	High	11.43968, 77.87345	15 KM/Hr
1	Turn	High	11.44029, 77.87544	15 KM/Hr
