JOURNEY RISK MANAGEMENT (JRM) STUDY

Salem Terminal TO SRI BALAJI AGENCIES IOC DEALER

Objective of the JRM Report

This JRM report is designed to ensure compliance with the Central Motor Vehicle Rules, 1989 (CMVR), AIS 140 standards, and the Road Transport Safety Policy (RTSP). It provides a comprehensive risk assessment for the transportation of hazardous materials along specified routes. By integrating these legal frameworks, the report offers a broad strategy for identifying and mitigating route-specific risks.

Regulatory Compliance

The report complies with the Central Motor Vehicles (Eleventh Amendment) Rules, 2022, mandating safe transportation practices for N2 and N3 category vehicles carrying hazardous materials. These rules require detailed route assessments, especially regarding road conditions, speed limits, and risk areas, to ensure safety compliance.

Risk Management Strategy

This report categorizes transportation routes into high-risk and medium-risk areas, with a focus on factors such as sharp turns, accident-prone regions, and elevation changes. The goal is to provide actionable

recommendations to minimize these risks, including speed regulations, driver warnings for hazardous zones, and the option of alternate routes.

Compliance with the Road Transport Safety Policy (RTSP)

The report integrates RTSP provisions, including mandatory driving hours, rest periods, and nighttime driving restrictions. It ensures that drivers follow official guidelines, such as taking prescribed rest breaks and avoiding dangerous road conditions like poor visibility, heavy crowds, or high-traffic areas during peak hours.

Emergency Preparedness and Response

The report highlights the significance of predetermined emergency stops for refueling, rest, and overnight stays. It includes protocols for safe responses to road hazards, alternative routes, and rerouting processes if roads are closed or severe weather arises. This aligns with the RTSP emphasis on driver safety and rapid emergency response.

Environmental Considerations

The JRM report addresses environmental risks along the route, ensuring compliance with environmental protection laws in ecologically sensitive zones. It suggests strategies such as identifying areas near water bodies, forests, or populated regions and implementing safety measures to minimize environmental impacts during transport.

Journey Risk Mitigation

The report includes route-specific risk assessments, detailed journey charts, and defensive driving guidelines for each transport route. Integration with vehicle tracking systems guarantees real-time warnings on hazardous areas, speed limits, and mandatory stops, consistent with RTSP and CMVR safety norms.

Compliance with Government Directives

This report fully adheres to governmental directives regarding hazardous material transportation, implementing mandatory speed limits, nighttime driving restrictions, and comprehensive driver briefings and real-time alerts about route-related risks.

Nadu. Key waypoints to be noted on this route are CVXF+HPR, FR48+7XQ, FVVM+MCQ, JXR2+RR8, MXVC+Q9F, QXHW+2G5, WW9C+XXQ, and WRVR+7HP.

Weather Conditions

The typical weather in Tamil Nadu ranges from tropical seasonal variations to monsoon influence. Key weather-related hazards include heavy rains during the monsoon (June to September), which could lead to flooding and reduced visibility. Additionally, high temperatures are common during the dry months (March to June), potentially affecting vehicle performance.

Traffic Patterns

Traffic congestion is typically experienced in urban areas and near market places, especially during rush hours (8-10 AM and 6-8 PM). The Salem - Kochi Highway is a significant connector and may have dense traffic, especially near economic centers like Salem. Rural roads may be less congested but could see increased traffic during local events or festivals.

Road Quality and Infrastructure

The highways such as Salem - Kochi Highway generally have good road quality and infrastructure. However, attention is needed when crossing into more rural segments, where road maintenance may be less frequent, leading to potential potholes or unpaved patches. Signage is generally adequate on major highways.

Alternative Routes for Emergencies

In case of major blockages or hazards, alternative routes could include using local roads that parallel the main route or reverting to major cities like Salem for re-routing. It's advisable for drivers to have updated maps and GPS services to assess real-time road conditions.

Local Regulations on Hazardous Material Transport

Tamil Nadu follows the Central Motor Vehicle Rules of India, which specify conditions for transporting hazardous materials. Vehicles must carry necessary permits and display hazmat placards. Night travel and transport in school zones may have restrictions.

Historical Incidents

In the past five years, the region has experienced a few incidents involving heavy vehicles, primarily due to vehicle failure or poor road conditions during heavy rain. There is no specific record of major incidents involving hazardous materials on the proposed route.

Environmental and Sensitive Areas

The route does not traverse major protected environmental zones, but drivers should be cautious around agricultural fields and residential areas to minimize noise and pollution.

Communication Coverage

Most of Tamil Nadu, including the proposed route, has good mobile network coverage. However, potential dead zones may exist in more remote or rural areas. It is recommended to ensure reliable communication tools are available, like satellite phones if necessary.

Emergency Response Times

Emergency services are relatively accessible within major towns with estimated response times of 30-45 minutes. In more remote sections, response times could exceed an hour due to distance and road conditions.

Overall Risk Assessment Summary

This route, while generally navigable for transport of hazardous materials, presents moderate risks related to weather, road quality, and congestion. With proper planning regarding travel times, emergency preparedness, and compliance with regulatory policies, the trip can be managed effectively. Constant awareness of real-time travel conditions will be critical for optimizing safe travel.

Risk Assessment - Turns

	Risk Type	Risk Level	Coordinates	Speed Limit
0	Turn	High	11.43968, 77.87345	15 KM/Hr
