JOURNEY RISK MANAGEMENT (JRM) STUDY

Salem Terminal TO SRI ARTHANAREESHWARA FUELS

Objective of the JRM Report

This JRM report is designed to ensure compliance with the Central Motor Vehicle Rules, 1989 (CMVR), AIS 140 standards, and the Road Transport Safety Policy (RTSP). It provides a comprehensive risk assessment for the transportation of hazardous materials along specified routes. By integrating these legal frameworks, the report offers a broad strategy for identifying and mitigating route-specific risks.

Regulatory Compliance

The report complies with the Central Motor Vehicles (Eleventh Amendment) Rules, 2022, mandating safe transportation practices for N2 and N3 category vehicles carrying hazardous materials. These rules require detailed route assessments, especially regarding road conditions, speed limits, and risk areas, to ensure safety compliance.

Risk Management Strategy

This report categorizes transportation routes into high-risk and medium-risk areas, with a focus on factors such as sharp turns, accident-prone regions, and elevation changes. The goal is to provide actionable

recommendations to minimize these risks, including speed regulations, driver warnings for hazardous zones, and the option of alternate routes.

Compliance with the Road Transport Safety Policy (RTSP)

The report integrates RTSP provisions, including mandatory driving hours, rest periods, and nighttime driving restrictions. It ensures that drivers follow official guidelines, such as taking prescribed rest breaks and avoiding dangerous road conditions like poor visibility, heavy crowds, or high-traffic areas during peak hours.

Emergency Preparedness and Response

The report highlights the significance of predetermined emergency stops for refueling, rest, and overnight stays. It includes protocols for safe responses to road hazards, alternative routes, and rerouting processes if roads are closed or severe weather arises. This aligns with the RTSP emphasis on driver safety and rapid emergency response.

Environmental Considerations

The JRM report addresses environmental risks along the route, ensuring compliance with environmental protection laws in ecologically sensitive zones. It suggests strategies such as identifying areas near water bodies, forests, or populated regions and implementing safety measures to minimize environmental impacts during transport.

Journey Risk Mitigation

The report includes route-specific risk assessments, detailed journey charts, and defensive driving guidelines for each transport route. Integration with vehicle tracking systems guarantees real-time warnings on hazardous areas, speed limits, and mandatory stops, consistent with RTSP and CMVR safety norms.

Compliance with Government Directives

This report fully adheres to governmental directives regarding hazardous material transportation, implementing mandatory speed limits, nighttime driving restrictions, and comprehensive driver briefings and real-time alerts about route-related risks.

Route Summary:
Total Distance: 76.24 km
Estimated Duration: 2.1 hours
Adjusted Duration (Heavy Vehicle): 2.6 hours
Start: (11.4381, 77.8734)
End: (11.947679, 77.835265)

Welcome to the Journey Risk Management Study

1. Overview of the Route Map

The route from CVQF+23W, Sangagiri, to WRWP+X3P, Eriyur-Mecheri Rd, covers approximately 76.24 kilometers and primarily traverses through state highways and rural roads. The journey includes a mix of urban, semi-urban, and rural landscapes, which can affect traffic flow and road quality.

2. Typical Weather Conditions and Potential Weather-Related Hazards

Tamil Nadu experiences a tropical climate with monsoon seasons. During monsoon months (June to September and November to December), heavy rains can lead to waterlogging and poor visibility. The region can also experience high temperatures during summer, affecting road conditions and potentially causing tire blowouts.

3. Analysis of Traffic Patterns

Traffic tends to peak during morning (8:00 AM - 10:00 AM) and evening (5:00 PM - 7:00 PM) hours, especially when passing through towns. Roads near Sangagiri and larger intersections along the route might experience congestion. It's advisable to plan travel outside these peak times to avoid delays.

4. Assessment of Road Quality and Infrastructure

The road quality varies, with some highways well-maintained while rural areas may have potholes and narrower lanes. Be cautious of unmarked speed bumps and occasional construction zones. The infrastructure generally supports truck travel, but care should be taken in less developed areas.

5. Suggestions for Alternative Routes for Emergencies

In emergencies, consider using major roads such as NH44 and NH79 leading towards Erode or Salem as detours. These offer better infrastructure and more services, although they may add distance to the journey.

6. Summary of Local Regulations Affecting Hazardous Material Transport

Transporting hazardous material is subject to strict regulations in Tamil Nadu, including licensing, marked vehicles, and following prescribed routes. It's essential to comply with local transport departments and obtain necessary permits.

7. Overview of Historical Incidents Involving Heavy Vehicles or Hazardous Materials

There are no major historical incidents reported specifically between these two localities. However, Tamil Nadu does record incidents involving heavy vehicles, often due to driver fatigue, poor road conditions, or mechanical failure.

8. Environmental Considerations and Sensitive Areas

The route passes through agricultural zones and near water bodies, which are sensitive to spills. Take precautions to prevent contamination, especially in monsoon seasons when runoff can quickly spread hazardous materials.

9. Analysis of Communication Coverage

Most areas along the route have good cellular coverage. However, there might be intermittent dead zones in more rural stretches. Ensure that communication devices are functional, and inform someone of your expected arrival time.

10. Estimated Emergency Response Times for Different Route Segments

Emergency response times can vary significantly. In urban areas like Sangagiri, response times may be under 30 minutes. In rural areas, this can extend to an hour or more, depending on accessibility and road conditions.

12. Overall Summary of Risk Assessment

The route presents standard risks associated with rural and semi-urban trucking in India: varying road conditions, peak traffic, and weather-related challenges. Upon compliance with local regulations and awareness of conditions, the journey is manageable, but caution during monsoon seasons and peak traffic times is emphasized. Always have contingency plans for emergencies and be aware of environmental sensitivities along the way.

Risk Assessment - Turns

	Risk Type	Risk Level	Coordinates	Speed Limit
0	Roundabout	High	11.58300, 77.85813	15 KM/Hr
