JOURNEY RISK MANAGEMENT (JRM) STUDY

Salem Terminal TO RPS FUELS

Objective of the JRM Report

This JRM report is designed to ensure compliance with the Central Motor Vehicle Rules, 1989 (CMVR), AIS 140 standards, and the Road Transport Safety Policy (RTSP). It provides a comprehensive risk assessment for the transportation of hazardous materials along specified routes. By integrating these legal frameworks, the report offers a broad strategy for identifying and mitigating route-specific risks.

Regulatory Compliance

The report complies with the Central Motor Vehicles (Eleventh Amendment) Rules, 2022, mandating safe transportation practices for N2 and N3 category vehicles carrying hazardous materials. These rules require detailed route assessments, especially regarding road conditions, speed limits, and risk areas, to ensure safety compliance.

Risk Management Strategy

This report categorizes transportation routes into high-risk and medium-risk areas, with a focus on factors such as sharp turns, accident-prone regions, and elevation changes. The goal is to provide actionable

recommendations to minimize these risks, including speed regulations, driver warnings for hazardous zones, and the option of alternate routes.

Compliance with the Road Transport Safety Policy (RTSP)

The report integrates RTSP provisions, including mandatory driving hours, rest periods, and nighttime driving restrictions. It ensures that drivers follow official guidelines, such as taking prescribed rest breaks and avoiding dangerous road conditions like poor visibility, heavy crowds, or high-traffic areas during peak hours.

Emergency Preparedness and Response

The report highlights the significance of predetermined emergency stops for refueling, rest, and overnight stays. It includes protocols for safe responses to road hazards, alternative routes, and rerouting processes if roads are closed or severe weather arises. This aligns with the RTSP emphasis on driver safety and rapid emergency response.

Environmental Considerations

The JRM report addresses environmental risks along the route, ensuring compliance with environmental protection laws in ecologically sensitive zones. It suggests strategies such as identifying areas near water bodies, forests, or populated regions and implementing safety measures to minimize environmental impacts during transport.

Journey Risk Mitigation

The report includes route-specific risk assessments, detailed journey charts, and defensive driving guidelines for each transport route. Integration with vehicle tracking systems guarantees real-time warnings on hazardous areas, speed limits, and mandatory stops, consistent with RTSP and CMVR safety norms.

Compliance with Government Directives

This report fully adheres to governmental directives regarding hazardous material transportation, implementing mandatory speed limits, nighttime driving restrictions, and comprehensive driver briefings and real-time alerts about route-related risks.

Route Summary:
Total Distance: 93.23 km
Estimated Duration: 2.0 hours
Adjusted Duration (Heavy Vehicle): 2.4 hours
Start: (11.4381, 77.8734)
End: (10.929241, 78.434603)

Welcome to the Journey Risk Management Study

1. Overview of the Route Map: The route from Sangagiri to Rajendram North spans approximately 93.23 kilometers and typically follows major roadways that interconnect towns and areas between these locations. The journey primarily traverses state highways and passes through semi-urban and rural regions, which include intersections with local roads and potential bottlenecks in small towns.

2. Typical Weather Conditions and Potential Weather-related Hazards: The region experiences a tropical climate with a hot and dry summer, a heavy monsoon season from June to October, and a mild winter. During the monsoon, heavy rains can lead to flooding and waterlogged roads, which might increase the risk of accidents or delays. Drivers should monitor weather forecasts and be prepared for sudden downpours, reduced visibility, and slippery road conditions.

3. Analysis of Traffic Patterns, Highlighting Peak Hours and Congestion-prone Areas: Traffic typically picks up during early morning hours (7 AM - 9 AM) and late afternoon (5 PM - 7 PM), particularly near towns and junctions. Congestion can occur around market areas or small towns like Kumarapalayam and Namakkal, especially when local shops and schools influence traffic flow. Weekends could see heavier traffic due to local activities and events.

4. Assessment of Road Quality and Infrastructure: While major road segments are generally well-maintained, certain stretches might have uneven surfaces or potholes, especially after the rainy season. Roads in rural or less-developed areas may lack thorough signage or adequate lighting, posing a hazard during night-time travel.

5. Suggestions for Alternative Routes for Emergencies: In case of severe weather or road closures, alternative routes may include bypassing smaller towns for highways, though these may add distance or time to the journey. Route via Namakkal and Trichy road offers an alternate path should primary roads become non-navigable.

6. Summary of Local Regulations Affecting Hazardous Material Transport: Transport of hazardous materials requires adherence to state and national regulations, including proper vehicle signage, driver certifications, permissible times for transport (avoiding peak traffic in city limits), and certain routes designated specifically for such materials to limit exposure near populated areas.

7. Overview of Historical Incidents Involving Heavy Vehicles or Hazardous Materials: The region has a moderate history of vehicular accidents, predominantly minor collisions near city centers and junctions. There are limited reported incidents specifically involving hazardous materials, but general traffic accidents suggest attention to road intersections and speed regulations.

8. Environmental Considerations and Sensitive Areas: The route crosses agricultural lands and near several water bodies. Drivers should be cautious of wildlife areas or natural reserves near the route that might lead to road crossings by animals, more so during early morning or evening hours.

9. Analysis of Communication Coverage, Noting Potential Dead Zones: Majority of the route is covered by mobile networks except for isolated stretches in rural or low-signal areas. Dead zones are mostly outside city or town centers, suggesting preparation for limited communication in these areas.

10. Estimated Emergency Response Times for Different Route Segments: Emergency response times in urban areas can vary from 15 to 30 minutes depending on traffic, while in rural segments, it might extend to 45 minutes or more. Availability of roadside assistance may be lower in rural areas.

11. Overall Summary of Risk Assessment: The route from Sangagiri to Rajendram North generally poses moderate travel risk. Potential hazards include weather-related disruptions, traffic congestion, varying road conditions, and patchy communication coverage. Critical risk management includes monitoring weather updates, careful planning of travel times to avoid peak congestion, ensuring vehicle

maintenance, and adherence to hazardous material regulations. Emergency preparedness and alternative routing plans are essential parts of risk mitigation strategies for transport safety.

Risk Assessment - Turns

	Risk Type	Risk Level	Coordinates	Speed Limit
0	Roundabout	High	11.38395, 77.89480	15 KM/Hr
