JOURNEY RISK MANAGEMENT (JRM) STUDY

Salem Terminal to TSP & CO

Objective of the JRM Report

This JRM report is designed to ensure compliance with the Central Motor Vehicle Rules, 1989 (CMVR), AIS 140 standards, and the Road Transport Safety Policy (RTSP). It provides a comprehensive risk assessment for the transportation of hazardous materials along specified routes. By integrating these legal frameworks, the report offers a broad strategy for identifying and mitigating route-specific risks.

Regulatory Compliance

The report complies with the Central Motor Vehicles (Eleventh Amendment) Rules, 2022, mandating safe transportation practices for N2 and N3 category vehicles carrying hazardous materials. These rules require detailed route assessments, especially regarding road conditions, speed limits, and risk areas, to ensure safety compliance.

Risk Management Strategy

This report categorizes transportation routes into high-risk and medium-risk areas, with a focus on factors such as sharp turns, accident-prone regions, and elevation changes. The goal is to provide actionable

recommendations to minimize these risks, including speed regulations, driver warnings for hazardous zones, and the option of alternate routes.

Compliance with the Road Transport Safety Policy (RTSP)

The report integrates RTSP provisions, including mandatory driving hours, rest periods, and nighttime driving restrictions. It ensures that drivers follow official guidelines, such as taking prescribed rest breaks and avoiding dangerous road conditions like poor visibility, heavy crowds, or high-traffic areas during peak hours.

Emergency Preparedness and Response

The report highlights the significance of predetermined emergency stops for refueling, rest, and overnight stays. It includes protocols for safe responses to road hazards, alternative routes, and rerouting processes if roads are closed or severe weather arises. This aligns with the RTSP emphasis on driver safety and rapid emergency response.

Environmental Considerations

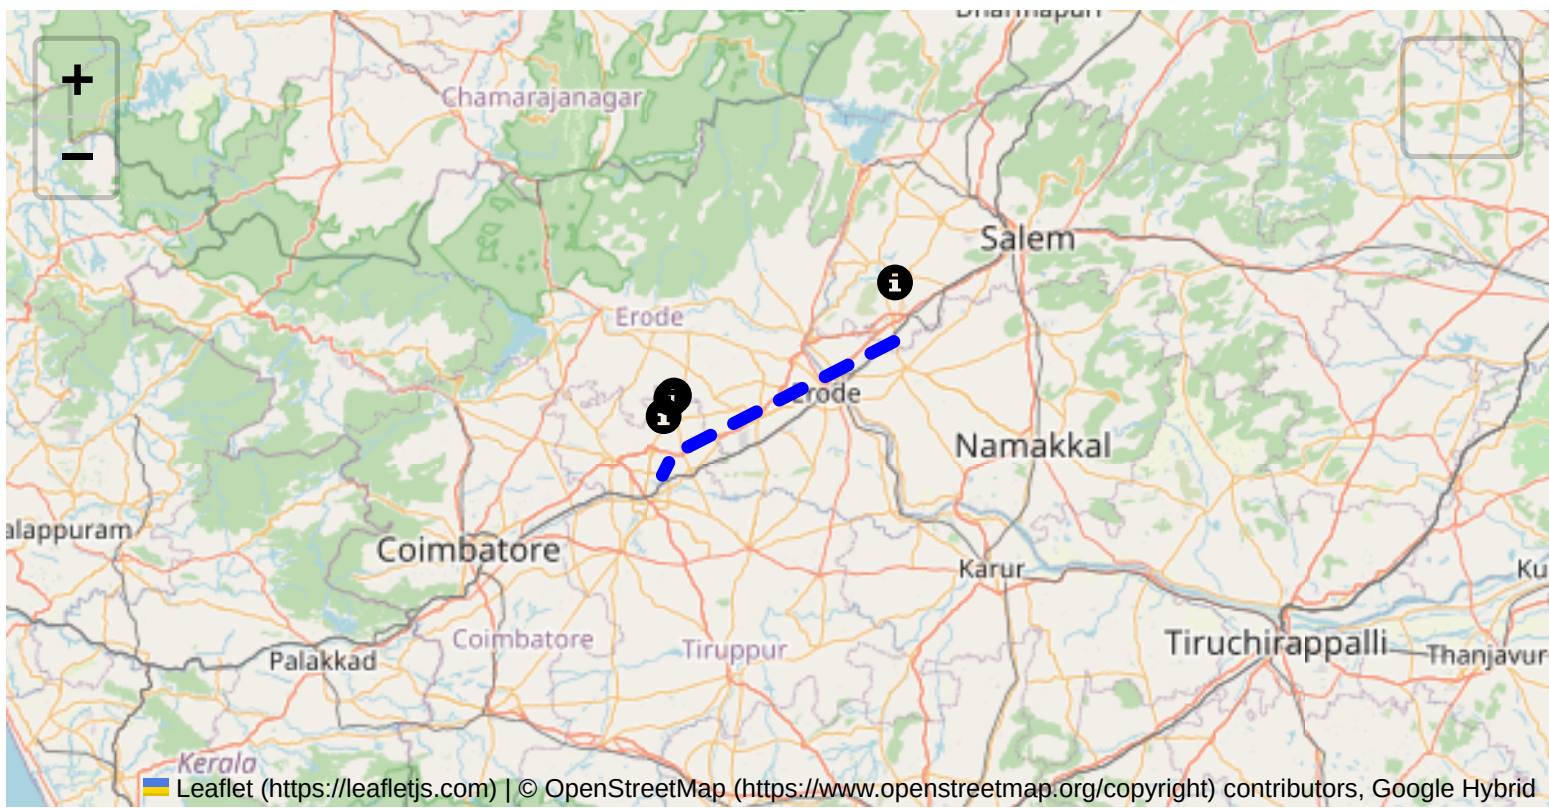

The JRM report addresses environmental risks along the route, ensuring compliance with environmental protection laws in ecologically sensitive zones. It suggests strategies such as identifying areas near water bodies, forests, or populated regions and implementing safety measures to minimize environmental impacts during transport.

Journey Risk Mitigation

The report includes route-specific risk assessments, detailed journey charts, and defensive driving guidelines for each transport route. Integration with vehicle tracking systems guarantees real-time warnings on hazardous areas, speed limits, and mandatory stops, consistent with RTSP and CMVR safety norms.

Compliance with Government Directives

This report fully adheres to governmental directives regarding hazardous material transportation, implementing mandatory speed limits, nighttime driving restrictions, and comprehensive driver briefings and real-time alerts about route-related risks.

Route Summary:
Total Distance: 75.85 km
Estimated Duration: 1.5 hours
Adjusted Duration (Heavy Vehicle): 1.9 hours
Start: (11.4381, 77.8734)
End: (11.159066, 77.379294)

Welcome to the Journey Risk Management Study

1. Overview of the Route Map

The route from Sangagiri to Vavipalayam via Kalipalayam in Tamil Nadu covers approximately 75.85 kilometers. The path typically involves several highways and regional roads, starting from Sangagiri, passing through Kalipalayam Road, and eventually connecting to NH 381 in Tiruppur District. The route traverses a mix of rural and minor urban areas.

2. Typical Weather Conditions and Potential Weather-Related Hazards

Tamil Nadu, especially the interior regions, experiences a tropical climate. Key weather considerations include:

- **Summer (March-June):** High temperatures ranging from 30°C to 40°C.
- **Monsoon (June-September):** Moderate to heavy rainfall may cause waterlogging and reduced visibility. Roads in rural areas could become slippery and hazardous.
- **Winter (November-February):** Relatively mild with temperatures ranging between 20°C and 30°C. Fog is less common but possible in early mornings.

3. Analysis of Traffic Patterns

- **Peak Hours:** Morning (7:30 AM - 9:30 AM) and evening (5 PM - 7 PM) are peak traffic hours.
- **Congestion-Prone Areas:** Entry and exit points of towns along the route, particularly at intersections near Kalipalayam, and the junction at NH 381, experience higher congestion.

4. Assessment of Road Quality and Infrastructure

Generally, the roads are maintained, but:

- **Regional Roads:** May have uneven surfaces and occasional potholes, particularly after monsoon.
- **Highways:** NH 381 is in relatively better condition, with proper signages and lane markings.

5. Suggestions for Alternative Routes for Emergencies

In case of heavy traffic congestion or emergencies:

- Utilize smaller state roads bypassing congested areas.
- Local knowledge should be consulted to determine the best alternative to NH 381, as minor roads might have limited capacity.

6. Summary of Local Regulations Affecting Hazardous Material Transport

- Drivers must adhere to regulations set by Tamil Nadu's Motor Vehicles Department for transporting hazardous materials, including specific permits and safety equipment.
- Restrictions may apply through certain municipal roads during peak hours.

7. Overview of Historical Incidents Involving Heavy Vehicles or Hazardous Materials

- Historical data indicates occasional accidents involving heavy vehicles, often attributed to speeding, overtaking inappropriately, or adverse weather conditions.

- No significant incidents involving hazardous materials have been reported on this specific route recently, emphasizing the importance of continued diligence.

8. Environmental Considerations and Sensitive Areas

- Care should be taken near agricultural lands and residential pockets to minimize noise and emissions.
- Sensitive areas include water bodies alongside which showing extra caution to prevent contamination.

9. Analysis of Communication Coverage

- Most major mobile networks provide good coverage along the route.
- Potential dead zones could be in isolated rural stretches, particularly in and around Kalipalayam.

10. Estimated Emergency Response Times

- Urban/Highway Segments:** 30-45 minutes for emergency services due to accessibility.
- Rural Segments:** Could extend to 60-90 minutes due to infrastructural constraints and lower road quality.

11. Overall Summary of Risk Assessment

The Sangagiri to Vavipalayam route through Kalipalayam appears moderately safe for transporting goods, including hazardous materials, provided due diligence is maintained. Major risks include weather-related hazards, congestion at peak hours, and potential communication dead zones. Adhering to safety regulations, checking vehicle conditions, and staying informed of weather and traffic updates will mitigate most risks. Alternative pathways should be considered during poor conditions or emergencies to ensure timely and safe transport. Overall, careful planning for potential hazards and emergencies should ensure effective risk management along this route.

Risk Assessment - Turns

	Risk Type	Risk Level	Coordinates	Speed Limit
0	Turn	Medium	11.43822, 77.87348	30 KM/Hr
1	Turn	High	11.43968, 77.87345	15 KM/Hr
