JOURNEY RISK MANAGEMENT (JRM) STUDY

Salem Terminal TO MANIPRIYA PETROL BUNK

Objective of the JRM Report

This JRM report is designed to ensure compliance with the Central Motor Vehicle Rules, 1989 (CMVR), AIS 140 standards, and the Road Transport Safety Policy (RTSP). It provides a comprehensive risk assessment for the transportation of hazardous materials along specified routes. By integrating these legal frameworks, the report offers a broad strategy for identifying and mitigating route-specific risks.

Regulatory Compliance

The report complies with the Central Motor Vehicles (Eleventh Amendment) Rules, 2022, mandating safe transportation practices for N2 and N3 category vehicles carrying hazardous materials. These rules require detailed route assessments, especially regarding road conditions, speed limits, and risk areas, to ensure safety compliance.

Risk Management Strategy

This report categorizes transportation routes into high-risk and medium-risk areas, with a focus on factors such as sharp turns, accident-prone regions, and elevation changes. The goal is to provide actionable

recommendations to minimize these risks, including speed regulations, driver warnings for hazardous zones, and the option of alternate routes.

Compliance with the Road Transport Safety Policy (RTSP)

The report integrates RTSP provisions, including mandatory driving hours, rest periods, and nighttime driving restrictions. It ensures that drivers follow official guidelines, such as taking prescribed rest breaks and avoiding dangerous road conditions like poor visibility, heavy crowds, or high-traffic areas during peak hours.

Emergency Preparedness and Response

The report highlights the significance of predetermined emergency stops for refueling, rest, and overnight stays. It includes protocols for safe responses to road hazards, alternative routes, and rerouting processes if roads are closed or severe weather arises. This aligns with the RTSP emphasis on driver safety and rapid emergency response.

Environmental Considerations

The JRM report addresses environmental risks along the route, ensuring compliance with environmental protection laws in ecologically sensitive zones. It suggests strategies such as identifying areas near water bodies, forests, or populated regions and implementing safety measures to minimize environmental impacts during transport.

Journey Risk Mitigation

The report includes route-specific risk assessments, detailed journey charts, and defensive driving guidelines for each transport route. Integration with vehicle tracking systems guarantees real-time warnings on hazardous areas, speed limits, and mandatory stops, consistent with RTSP and CMVR safety norms.

Compliance with Government Directives

This report fully adheres to governmental directives regarding hazardous material transportation, implementing mandatory speed limits, nighttime driving restrictions, and comprehensive driver briefings and real-time alerts about route-related risks.

Route Summary:
Total Distance: 150.65 km
Estimated Duration: 3.3 hours
Adjusted Duration (Heavy Vehicle): 4.1 hours
Start: (11.4381, 77.8734)
End: (12.329611, 78.39942)

Welcome to the Journey Risk Management Study

1. Overview of the Route Map: The route from Sangagiri to Balethottam spans approximately 150.65 kilometers, covering several towns and junctions across Tamil Nadu, India. Starting from Sangagiri, this route passes through key locations such as Kangeyampalayam, Padaiveedu, Tharamangalam, Omalur, Thoppur, Balajangamanhalli, Reddihalli, Manjamedu, and Melkaravoni before reaching Balethottam. This journey primarily follows major state highways and some rural roads, making it a diverse route in terms of road types.

2. Typical Weather Conditions and Potential Weather-Related Hazards: Tamil Nadu generally experiences a tropical climate. The main weather-related hazards along the route include:

- **Monsoon Rains (June to September):** Heavy rains can cause flooding and waterlogging, particularly affecting rural and less developed roads.
- **Heat Waves (March to June):** High temperatures can impact vehicle performance and driver fatigue.
- **Cyclones (October to December):** Although less frequent inland, cyclonic activities can lead to heavy rainfall and disruptions.

3. Analysis of Traffic Patterns:

- **Peak Hours:** Traffic congestion is more likely to occur during morning (7:30 AM - 10:00 AM) and evening peak hours (5:00 PM - 8:00 PM).
- **Congestion-Prone Areas:** Urban centers like Omalur and landscape bottlenecks such as narrow bridges in Padaiveedu may see higher congestion.

4. Assessment of Road Quality and Infrastructure:

- **State Highways:** Generally well-maintained, but occasional potholes and uneven surfaces can be found during the monsoon.
- **Rural Roads:** May have limited lighting, narrow passages, and varying surface quality, requiring cautious driving for heavy vehicles.

5. Suggestions for Alternative Routes for Emergencies:

- Via NH-44 for major portions to take advantage of better infrastructure in case of roadblocks on the primary route.
- Detour through major towns with adequate facilities like Salem for immediate issues.

6. Summary of Local Regulations Affecting Hazardous Material Transport:

- Require adherence to safety protocols including clear labeling, proper handling, and documentation.
- Restrictions on carrying certain types of goods through populated areas during peak times, requiring permits.

7. Overview of Historical Incidents:

- Incidents involving heavy vehicles primarily include overturning and collision due to narrow roads and high-speed areas.
- Reports of accidents increase during adverse weather conditions, stressing the need for caution.

8. Environmental Considerations and Sensitive Areas:

- Proximity to wildlife reserves near the Thoppur area, requiring noise control and speed regulations.
- Agricultural zones necessitate care to prevent contamination or spillage during transport.

9. Analysis of Communication Coverage:

- Most of the route is well-covered with telecommunications networks.
- Possible dead zones in rural stretches like the segments near Manjamedu and Reddihalli.

10. Estimated Emergency Response Times:

- Urban areas such as Omalur are equipped with emergency services potentially attending within 30 minutes.
- Rural areas might experience delays up to 1-2 hours depending on accessibility.

12. Overall Summary of Risk Assessment: The route from Sangagiri to Balethottam is moderately safe for transporting hazardous materials, given the infrastructure and environmental considerations. However, risks primarily arise from weather conditions, road quality in rural sections, and congestion during peak hours. Adherence to local transport regulations, cautious driving, and preparedness for emergencies are crucial for minimizing these risks. Regular monitoring of weather forecasts and traffic updates, along with ensuring proper vehicle maintenance, can significantly enhance the safety of the transport operation.

Risk Assessment - Turns

	Risk Type	Risk Level	Coordinates	Speed Limit
0	U-Turn	High	11.4749755, 77.869149	10 KM/Hr
