JOURNEY RISK MANAGEMENT (JRM) STUDY

Salem Terminal TO SRI CAUVERY AGENCIES

Objective of the JRM Report

This JRM report is designed to ensure compliance with the Central Motor Vehicle Rules, 1989 (CMVR), AIS 140 standards, and the Road Transport Safety Policy (RTSP). It provides a comprehensive risk assessment for the transportation of hazardous materials along specified routes. By integrating these legal frameworks, the report offers a broad strategy for identifying and mitigating route-specific risks.

Regulatory Compliance

The report complies with the Central Motor Vehicles (Eleventh Amendment) Rules, 2022, mandating safe transportation practices for N2 and N3 category vehicles carrying hazardous materials. These rules require detailed route assessments, especially regarding road conditions, speed limits, and risk areas, to ensure safety compliance.

Risk Management Strategy

This report categorizes transportation routes into high-risk and medium-risk areas, with a focus on factors such as sharp turns, accident-prone regions, and elevation changes. The goal is to provide actionable

recommendations to minimize these risks, including speed regulations, driver warnings for hazardous zones, and the option of alternate routes.

Compliance with the Road Transport Safety Policy (RTSP)

The report integrates RTSP provisions, including mandatory driving hours, rest periods, and nighttime driving restrictions. It ensures that drivers follow official guidelines, such as taking prescribed rest breaks and avoiding dangerous road conditions like poor visibility, heavy crowds, or high-traffic areas during peak hours.

Emergency Preparedness and Response

The report highlights the significance of predetermined emergency stops for refueling, rest, and overnight stays. It includes protocols for safe responses to road hazards, alternative routes, and rerouting processes if roads are closed or severe weather arises. This aligns with the RTSP emphasis on driver safety and rapid emergency response.

Environmental Considerations

The JRM report addresses environmental risks along the route, ensuring compliance with environmental protection laws in ecologically sensitive zones. It suggests strategies such as identifying areas near water bodies, forests, or populated regions and implementing safety measures to minimize environmental impacts during transport.

Journey Risk Mitigation

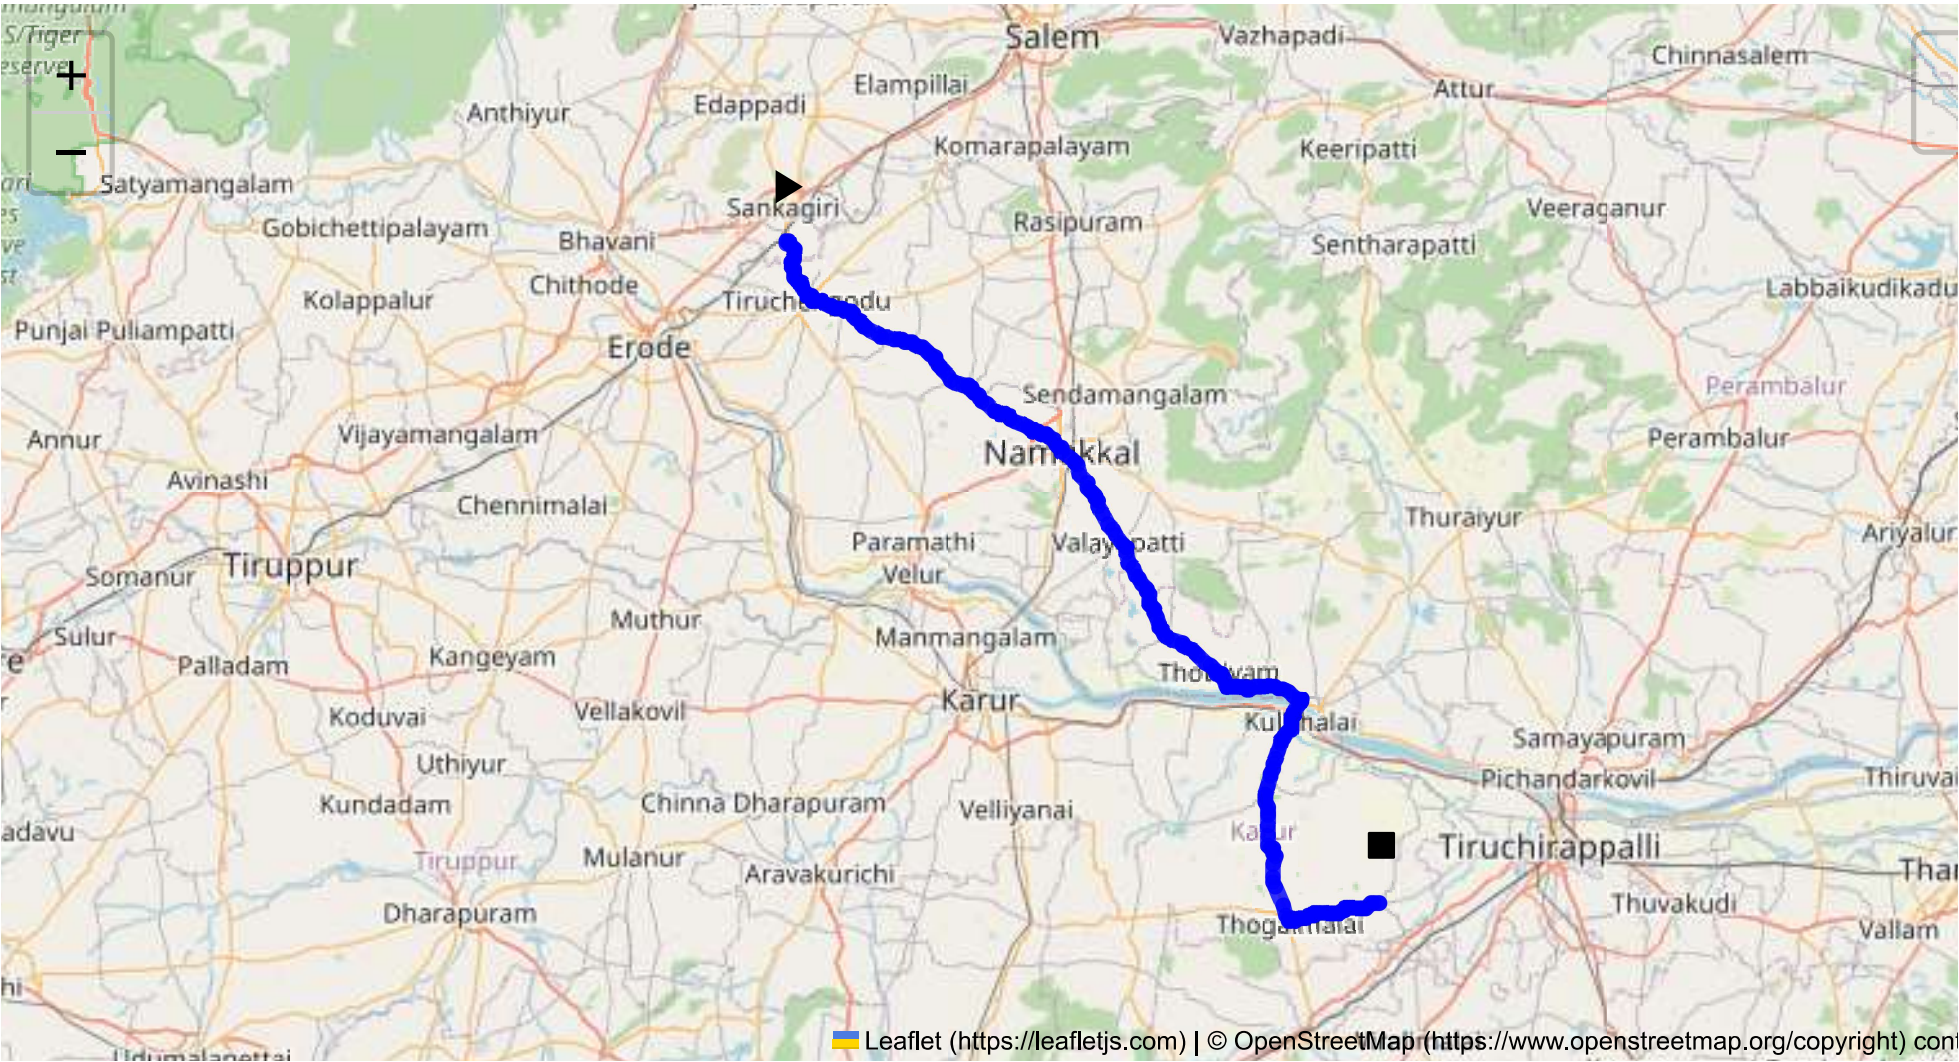

The report includes route-specific risk assessments, detailed journey charts, and defensive driving guidelines for each transport route. Integration with vehicle tracking systems guarantees real-time warnings on hazardous areas, speed limits, and mandatory stops, consistent with RTSP and CMVR safety norms.

Compliance with Government Directives

This report fully adheres to governmental directives regarding hazardous material transportation, implementing mandatory speed limits, nighttime driving restrictions, and comprehensive driver briefings and real-time alerts about route-related risks.

Route Summary:
Total Distance: 127.37 km
Estimated Duration: 2.7 hours
Adjusted Duration (Heavy Vehicle): 3.4 hours
Start: (11.4381, 77.8734)
End: (10.746645, 78.504433)

Welcome to the Journey Risk Management Study

Route Safety Analysis: Sangagiri to Kavalkaranpatti

1. Overview of the Route Map

The route from Sangagiri to Kavalkaranpatti is approximately 127.37 kilometers long. It predominantly follows the NH 44 south to Namakkal, then transfers onto NH 79 before proceeding along several state highways to reach Kavalkaranpatti. The journey typically spans around 2.69 hours for trucks, providing varied road conditions from highways to state and local roads. The route passes through semi-urban and rural areas.

2. Typical Weather Conditions and Potential Weather-Related Hazards

Tamil Nadu experiences a tropical climate, with hot summers, a monsoon season from October to December, and mild winters. The route may encounter:

- Heavy rain during the monsoon, potentially causing waterlogging and reduced visibility.
- High temperatures in summer could affect vehicle performance, especially heavy vehicles.
- Occasional thunderstorms could disrupt travel.

3. Traffic Patterns and Congestion-Prone Areas

- **Peak Hours:** Typically, morning (8-10 AM) and evening (5-7 PM)
- **Congestion Areas:** Expect congestion near major town intersections such as Namakkal and Salem due to local and through traffic.
- Road work or local events might cause temporary traffic delays.

4. Assessment of Road Quality and Infrastructure

- **Highways (NH 44 & NH 79):** Generally well-maintained with good surface quality but with occasional potholes that can be hazardous, especially post-monsoon.
- **State Highways:** Varying conditions, some sections might be narrow or poorly lit at night.
- **Bridges:** Essential to verify load limits for trucks, some older bridges might require caution.

5. Suggestions for Alternative Routes for Emergencies

- **Via Namakkal:** Alternate diversion paths through multiple connecting state highways if NH routes are obstructed.
- For traffic diversions, utilizing NH 544 when connecting back towards smaller linking roads could provide a bypass.

6. Summary of Local Regulations Affecting Hazardous Material Transport

- Permits required for movement of hazardous materials.
- Restricted movement during peak city hours in urban spots like Salem.
- Adherence to safety and signaling protocols is strictly enforced.

7. Overview of Historical Incidents

- No major recurring incidents, but accidents involving heavy vehicles are generally reported due to speeding or poor conditions in wet weather.
- Check local transport department records for any hazardous material-specific incidents.

8. Environmental Considerations and Sensitive Areas

- Several agricultural zones: Avoid contamination by adhering to spillage and leakage protocols.
- Water bodies near highways; ensure no dumping or leaking chemicals.

9. Communication Coverage

- Generally good on major highways, but be cautious of potential dead zones in rural stretches.
- Equip vehicles with satellite phones or emergency communication devices.

10. Estimated Emergency Response Times

- Highways:** 30-45 minutes average due to good connectivity.
- Rural Areas:** Could extend to 1-2 hours due to reduced accessibility and traffic volume.

11. Overall Summary of Risk Assessment

The route is feasible for heavy vehicles with moderate risk components:

- Weather and Physical Hazards:** Rain and heat pose potential risks, affecting vehicle performance and road conditions.
- Traffic and Infrastructure:** Major towns and poorly maintained state roads can delay travel.
- Ensure compliance with local regulations regarding hazardous materials.
- Communications and emergency preparedness should be optimized, factoring dead zones and potential delays in response times.
