JOURNEY RISK MANAGEMENT (JRM) STUDY

Salem Terminal TO SREE LAKSHMI AGENCIES UNIT- II

Objective of the JRM Report

This JRM report is designed to ensure compliance with the Central Motor Vehicle Rules, 1989 (CMVR), AIS 140 standards, and the Road Transport Safety Policy (RTSP). It provides a comprehensive risk assessment for the transportation of hazardous materials along specified routes. By integrating these legal frameworks, the report offers a broad strategy for identifying and mitigating route-specific risks.

Regulatory Compliance

The report complies with the Central Motor Vehicles (Eleventh Amendment) Rules, 2022, mandating safe transportation practices for N2 and N3 category vehicles carrying hazardous materials. These rules require detailed route assessments, especially regarding road conditions, speed limits, and risk areas, to ensure safety compliance.

Risk Management Strategy

This report categorizes transportation routes into high-risk and medium-risk areas, with a focus on factors such as sharp turns, accident-prone regions, and elevation changes. The goal is to provide actionable

recommendations to minimize these risks, including speed regulations, driver warnings for hazardous zones, and the option of alternate routes.

Compliance with the Road Transport Safety Policy (RTSP)

The report integrates RTSP provisions, including mandatory driving hours, rest periods, and nighttime driving restrictions. It ensures that drivers follow official guidelines, such as taking prescribed rest breaks and avoiding dangerous road conditions like poor visibility, heavy crowds, or high-traffic areas during peak hours.

Emergency Preparedness and Response

The report highlights the significance of predetermined emergency stops for refueling, rest, and overnight stays. It includes protocols for safe responses to road hazards, alternative routes, and rerouting processes if roads are closed or severe weather arises. This aligns with the RTSP emphasis on driver safety and rapid emergency response.

Environmental Considerations

The JRM report addresses environmental risks along the route, ensuring compliance with environmental protection laws in ecologically sensitive zones. It suggests strategies such as identifying areas near water bodies, forests, or populated regions and implementing safety measures to minimize environmental impacts during transport.

Journey Risk Mitigation

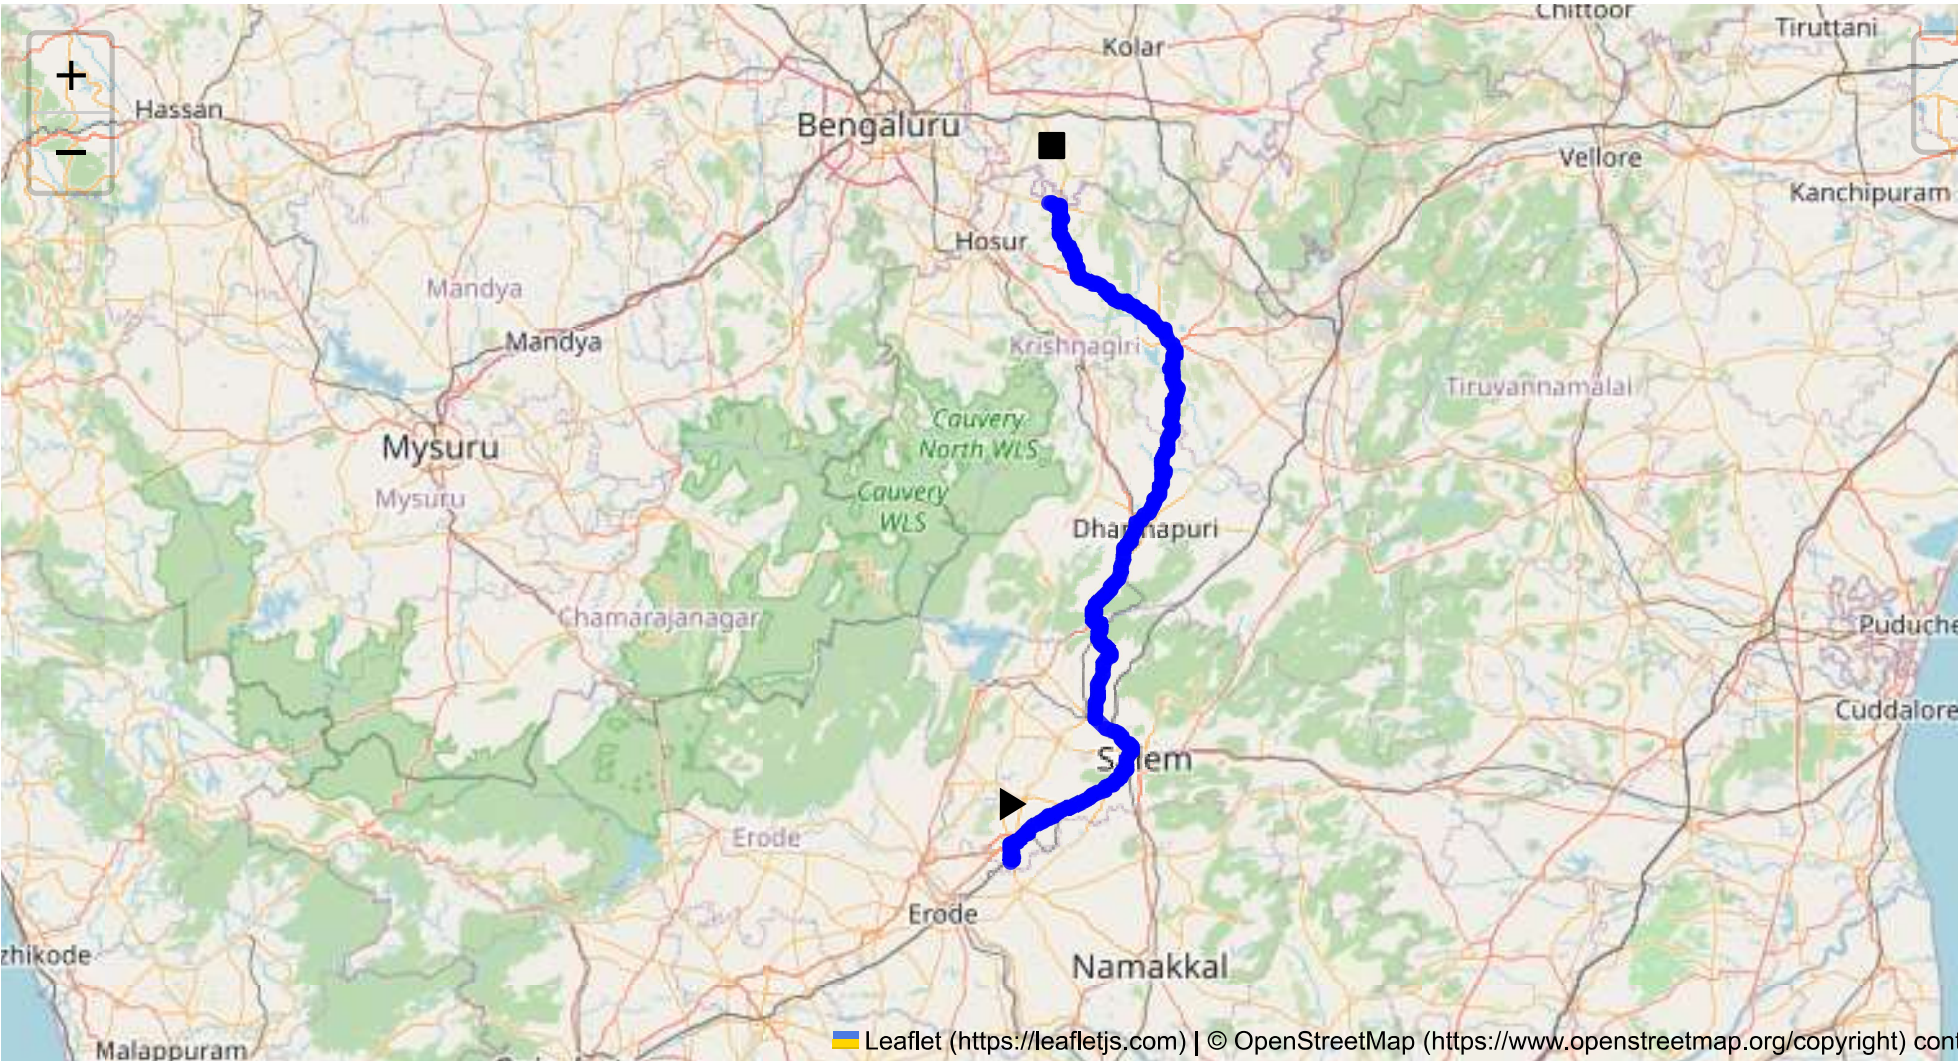

The report includes route-specific risk assessments, detailed journey charts, and defensive driving guidelines for each transport route. Integration with vehicle tracking systems guarantees real-time warnings on hazardous areas, speed limits, and mandatory stops, consistent with RTSP and CMVR safety norms.

Compliance with Government Directives

This report fully adheres to governmental directives regarding hazardous material transportation, implementing mandatory speed limits, nighttime driving restrictions, and comprehensive driver briefings and real-time alerts about route-related risks.

Route Summary:
Total Distance: 200.07 km
Estimated Duration: 3.8 hours
Adjusted Duration (Heavy Vehicle): 4.8 hours
Start: (11.4381, 77.8734)
End: (12.809656, 77.955786)

Welcome to the Journey Risk Management Study

1. Overview of the Route Map

The specified route from Sangagiri to Sulthan Pet in Tamil Nadu covers approximately 200 kilometers and passes through a mix of rural and semi-urban areas. The path primarily involves major highways and regional roads, including NH 44 and several state highways. The journey traverses diverse landscapes, which can include hilly terrains as well as flat stretches.

2. Typical Weather Conditions and Potential Weather-related Hazards

Tamil Nadu generally experiences hot summers and moderate to heavy monsoons, particularly between June and September. Travelers should anticipate potential weather-related hazards such as:

- Heavy rains causing flooding or road washouts, especially during the monsoon season.
- Reduced visibility and slippery roads during heavy rainfall.
- High temperatures, which might lead to road surface damage during summer.

3. Traffic Patterns

- **Peak Hours:** Expect increased traffic from 8:00 AM to 10:00 AM and 5:00 PM to 8:00 PM, especially near urban centers and major junctions.
- **Congestion-prone Areas:** Congestion is common near city outskirts, major road intersections, and toll plazas.

4. Assessment of Road Quality and Infrastructure

- **National Highways (e.g., NH 44):** Generally well-maintained with adequate signage, rest stops, and fuel stations.
- **State Highways and Rural Roads:** Variable road quality; some stretches may be narrow, with potholes and minimal shoulder space.

5. Alternative Routes for Emergencies

- An alternative route could be via NH 79 and connecting state highways, though this may increase travel time.

6. Local Regulations Affecting Hazardous Material Transport

- Prior permission might be required for transporting hazardous materials through certain stretches.
- Certain districts may impose time restrictions for heavy vehicle movement, typically avoiding peak urban hours.

7. Historical Incidents Involving Heavy Vehicles or Hazardous Materials

- Occasional incidents reported involving overturned trucks or chemical spills, often due to speeding or poor road conditions during adverse weather.
- Strict enforcement of safety regulations post-incident, emphasizing proper loading and secure transport of materials.

8. Environmental Considerations and Sensitive Areas

- Presence of agricultural regions necessitates cautious driving to prevent harm to crops due to potential spills.
- Some stretches may pass close to water bodies, increasing the need for careful adherence to environmental protocols.

9. Communication Coverage

- Major highways and urban areas generally have good mobile coverage.
- Potential dead zones may exist in rural or hilly sections, especially away from main highways where signal strength can decrease.

10. Estimated Emergency Response Times

- Metropolitan or larger town areas: Approximately 15-30 minutes for emergency services.
- Rural and remote stretches: Response time can exceed 45 minutes to 1 hour due to distance and road accessibility.

11. Overall Risk Assessment

The main risks identified for this route include adverse weather conditions, variable traffic patterns, and sections of poor road quality. Given the nature of the cargo (hazardous materials), it is crucial to plan ahead, taking into account both traffic and weather forecasts. Ensuring adherence to local transportation regulations and maintaining high safety protocols is imperative for minimizing risk.

In summary, while the Sangagiri to Sulthan Pet route is manageable, due diligence regarding weather, vehicle condition, and adherence to safety measures and regulations can ensure a safer and smoother journey. It is advisable to remain updated with real-time information regarding traffic and weather conditions and have contingency plans for emergencies.

Risk Assessment - Turns

	Risk Type	Risk Level	Coordinates	Speed Limit
0	Turn	High	11.43968, 77.87345	15 KM/Hr
