JOURNEY RISK MANAGEMENT (JRM) STUDY

Salem Terminal TO K. G. FUEL STATION

Objective of the JRM Report

This JRM report is designed to ensure compliance with the Central Motor Vehicle Rules, 1989 (CMVR), AIS 140 standards, and the Road Transport Safety Policy (RTSP). It provides a comprehensive risk assessment for the transportation of hazardous materials along specified routes. By integrating these legal frameworks, the report offers a broad strategy for identifying and mitigating route-specific risks.

Regulatory Compliance

The report complies with the Central Motor Vehicles (Eleventh Amendment) Rules, 2022, mandating safe transportation practices for N2 and N3 category vehicles carrying hazardous materials. These rules require detailed route assessments, especially regarding road conditions, speed limits, and risk areas, to ensure safety compliance.

Risk Management Strategy

This report categorizes transportation routes into high-risk and medium-risk areas, with a focus on factors such as sharp turns, accident-prone regions, and elevation changes. The goal is to provide actionable

recommendations to minimize these risks, including speed regulations, driver warnings for hazardous zones, and the option of alternate routes.

Compliance with the Road Transport Safety Policy (RTSP)

The report integrates RTSP provisions, including mandatory driving hours, rest periods, and nighttime driving restrictions. It ensures that drivers follow official guidelines, such as taking prescribed rest breaks and avoiding dangerous road conditions like poor visibility, heavy crowds, or high-traffic areas during peak hours.

Emergency Preparedness and Response

The report highlights the significance of predetermined emergency stops for refueling, rest, and overnight stays. It includes protocols for safe responses to road hazards, alternative routes, and rerouting processes if roads are closed or severe weather arises. This aligns with the RTSP emphasis on driver safety and rapid emergency response.

Environmental Considerations

The JRM report addresses environmental risks along the route, ensuring compliance with environmental protection laws in ecologically sensitive zones. It suggests strategies such as identifying areas near water bodies, forests, or populated regions and implementing safety measures to minimize environmental impacts during transport.

Journey Risk Mitigation

The report includes route-specific risk assessments, detailed journey charts, and defensive driving guidelines for each transport route. Integration with vehicle tracking systems guarantees real-time warnings on hazardous areas, speed limits, and mandatory stops, consistent with RTSP and CMVR safety norms.

Compliance with Government Directives

This report fully adheres to governmental directives regarding hazardous material transportation, implementing mandatory speed limits, nighttime driving restrictions, and comprehensive driver briefings and real-time alerts about route-related risks.

Route Summary:
Total Distance: 144.31 km
Estimated Duration: 2.9 hours
Adjusted Duration (Heavy Vehicle): 3.6 hours
Start: (11.4381, 77.8734)
End: (12.3137925, 78.3799343)

Welcome to the Journey Risk Management Study

1. Overview of the Route Map

The route from Sangagiri (CVQF+23W) to Ayalampatti, Pochampalli (897H+GRM) covers approximately 144.31 kilometers. The journey typically entails traveling along National Highways and regional roads, moving through both urban and rural environments. Key towns along the way may include major junctions such as Salem and Dharmapuri, which are likely hubs for traffic and commerce.

2. Typical Weather Conditions and Potential Weather-Related Hazards

Tamil Nadu generally experiences a tropical climate. During summer (March-June), temperatures exceed 40°C, which can lead to road surface degradation. Monsoon season (October-December) can see heavy rains, leading to potential flooding and reduced visibility. It's important to check weather forecasts before the journey, as sudden rains can cause slippery roads and impact driving conditions.

3. Analysis of Traffic Patterns

- **Peak Hours:** Typically, traffic congestion can be significant during early morning hours (7-9 AM) and late evening (5-8 PM), especially near urban centers like Salem and Dharmapuri.
- **Congestion Areas:** Expect heavier traffic near city centers, toll booths, and market areas. National highways see high truck volume, which may slow transit during peak hours.

4. Assessment of Road Quality and Infrastructure

- **Highways:** Generally, National Highways are well-maintained with good signage. However, occasional potholes and uneven surfaces may be encountered.
- **Regional Roads:** These may have varying quality, including narrow lanes and limited shoulder space. Be cautious of sharp turns and rural traffic (including livestock).

5. Suggestions for Alternative Routes for Emergencies

- **Alternative 1:** If the primary National Highway is blocked, consider smaller state highways that parallel the main route.
- **Alternative 2:** Routes through less congested rural roads might provide a detour around heavily trafficked areas or accidents but at slower speeds.

6. Summary of Local Regulations Affecting Hazardous Material Transport

Tamil Nadu state laws require permits for transporting hazardous materials and often designate specific hours for transport to minimize public risk. Ensure compliance with all documentation, proper vehicle markings, and follow restricted area guidelines.

7. Overview of Historical Incidents Involving Heavy Vehicles or Hazardous Materials

Historically, there have been incidents of hazardous material spills and vehicle collisions, particularly on hilly or curving sections. Pay special attention to accident-prone areas near city ingress points and during adverse weather conditions.

8. Environmental Considerations and Sensitive Areas

Some segments of the route may run close to environmentally sensitive areas, including water bodies and agricultural lands. Be mindful of emissions and potential spillage, adhering strictly to environmental guidelines during transit.

9. Analysis of Communication Coverage

Mobile network coverage is generally reliable along National Highways in Tamil Nadu. However, expect potential dead zones in rural areas, particularly in valley areas or dense forests around hill sections.

10. Estimated Emergency Response Times for Different Route Segments

- Urban Sections:** Emergency response (police, fire, medical) typically within 30-45 minutes.
- Rural Areas:** Response times may extend to 60-90 minutes due to distance from major towns and limited infrastructure.

11. An Overall Summary of Risk Assessment

- Weather Risks:** High during monsoon; potential for heat-related road issues in summer.
- Traffic Risks:** Congestion likely in urban areas; higher accident exposure near city junctions.
- Infrastructure Risks:** Generally sound on National Highways; varies on regional roads.
- Regulatory Risks:** Strict adherence to hazardous material transport regulations is crucial.
- Communication and Emergency Risks:** Adequate in urban but weaker in rural segments.

Overall, the journey from Sangagiri to Ayalampatti involves moderate risk due to traffic, road conditions, and weather-related issues. Preparation in terms of alternative routes, regulatory compliance, and communication planning is essential for safe transit.

Risk Assessment - Turns

	Risk Type	Risk Level	Coordinates	Speed Limit
0	Turn	High	11.43968, 77.87345	15 KM/Hr
1	Turn	High	11.44029, 77.87544	15 KM/Hr
